

Field test kit, or gage. This a differential pressure gage which reads on a scale of 0-15 psid. Several different manufacturers of this product.

Adapter fittings which are screwed into the testcocks so that gage hoses can be attached. Different sizes may be needed depending upon the size of the backflow preventer

Sight tubes, typically clear plastic so that the water level can be seen inside. May need a 90° version or a straight version

Bleed valve arrangement

Hand tools for installing fittings or opening testcocks.
