LETTER FROM THE COMMITTEE

Welcome to ACEC New York's 58th Annual Engineering Excellence Awards, the "Academy Awards" of engineering.

EEA project entries are viewed annually by a distinguished panel of judges based on uniqueness and originality, technical value to the engineering profession, social and economic considerations, and success in meeting client goals.

In 2025, we proudly acknowledge 110 exceptional projects, reflecting the skill, passion, and perseverance that drive engineering excellence.

Congratulations to the award-winning teams and clients whose achievements have earned the respect of everyone tonight. Your talent and dedication are truly commendable.

2024 BEST PANEL AWARD

New pedestrian bridges allow greater accessibility to important greenspaces

Additional bracing was added to meet CSX's strict requirements for maximum deflection of sheetpiles

Light pollution was minimized during construction occurring adjacent to residential neighborhoods

Weirs were installed to reduce the impact of stormwater runoff along paths

Expanded wetlands within Bronx River shoreline restoration area

Bronx River Greenway Starlight Park Phase II, Stage II

The Starlight Park project allows a major greenway expansion in the Bronx to close a former gap in the Bronx River Greenway. The work converted 2.7 acres of formerly paved, industrial property into a beautiful greenspace with added connections for New Yorkers to enjoy. It improves the park and the Bronx River and also serves to connect communities that long ago were divided by the Cross Bronx and Bruckner Expressways, two of the busiest highways in the city.

We provided Resident Engineering and Inspections (REI) services for a critical 2/3-mile of the Greenway section between the South Bronx's Concrete Plant Park and Starlight Park, which were disconnected and aesthetically inconsistent with the surrounding stretches of the Greenway. With a focus on improving the health of the Bronx River, we completed extensive shoreline re-naturalization and wetlands restoration work; and we worked effectively to combat stormwater overflow and protected the river from construction debris at all times. We took care to perform in-water work outside of the Essential Fish Habitat season established by the Army Corps of Engineers.

The park now provides residents with much-needed opportunities for recreation, and demonstrates how improvements in infrastructure can transform quality of life and strengthen communities. The work links to Starlight Park's ballfields, playgrounds, boat launch, and the Bronx River House, a community educational facility; it also provides protected bicycle infrastructure, creating a true greenway and cycling network. Bronx residents now have greater accessibility to important greenspaces that will help community building and drive economic stimulation.

ACEC New York

The Best Panel Award is given to the firm that best communicates engineering excellence through the creation of a panel that is visually exciting and eye-catching, as well as promoting the achievements of the engineering profession.

2024 EMPIRE WINNER

Transforming the Long Island Rail Road

East Side Access

With a long history in New York City, East Side Access (ESA) is now completed and transporting Long Island Rail Road (LIRR) passengers to and from Manhattan's East Side. The project extends the LIRR from Queens to a new terminal, Grand Central Madison (GCM), below the existing Grand Central Terminal (GCT).

To complete such a complex project, many "firsts" were successfully completed to safely and efficiently navigate around the built environment and regularly scheduled train service. These methods led to the first major expansion of LIRR in more than a century and numerous other improvements, such as upgrades at Harold Interlocking, creating an immeasurable generational impact and standing to completely transform commuting between New York City and Long Island, as well as regional rail reliability.

On January 25, 2023, the inaugural LIRR train enters Grand Central Madison passing through Harold Interlocking.

Through the first use of ground freezing in the U.S., the New Austrian tunneling method/sequential excavation method was successfully completed for the first time in New York City. This process was used for the Northern Boulevard Crossing, a complex 120-foot section of tunnel under NYCT's BMT elevated Astoria Line, IND Queens Boulevard subway, and Northern Boulevard, a major truck route.

Caverns were excavated 150 feet below GCT to create a new, three-level GCM terminal with four platforms and eight tracks.

The first use of pressurized-face tunnel boring machines in the New York area—bored through soft-ground in Queens.

Harold Interlocking exemplifies the project's overall technical complexity, doubling the existing size of this vital juncture—all without stopping service. A key modification included relocating hundreds of catenary structures.

Commuters can easily navigate the spacious and modern Grand Central Madison, with wayfinding features embedded into artistic floor installations, as seen at the 46th St. Concourse.

East Side Access New York, NY

Client:
Metropolitan Transportation
Authority Construction and
Development, New York, NY

Entrant:
General Engineering
Consultant (WSP USA
Inc., STV, and Parsons
Corporation), New York, NY

2024: GENERAL ENGINEERING CONSULTANT (GEC)/ TRI-VENTURE PARTNERS: WSP USA INC.; STV, INC.; AND PARSONS CORPORATION FOR EAST SIDE ACCESS

The Empire Award honors the top-ranked project in the Engineering Excellence Program that was designed and built in New York State.

Circulation Improvements: Shenoy Engineering Wins Gold

Shenoy Engineering is proud to receive a **Gold Award** in the 2025 ACEC New York Engineering Excellence Awards for the Flushing-Main Street Circulation Improvements Design-Build Project.

This transformative project, serving over 44,000 daily commuters, enhanced the station's circulation, safety, and accessibility while preserving its historic architecture. Our MEP design innovations, including advanced lighting, CCTV security upgrades, and fire protection enhancements, helped modernize one of the busiest stations in the NYC transit system. By leveraging cutting-edge 3D modeling and sustainable energy solutions, we delivered an efficient, future-ready station—on time and within budget.

We extend our congratulations to all fellow honorees whose outstanding projects continue to push the boundaries of engineering excellence.

Shenoy Engineering PC – Engineering Access, Enhancing Mobility

Shenoy Engineering, PC is an award-winning NY + NJ **certified MBE** + SBE Full Service Design Engineering Consulting firm, specializing in

- mechanical engineering
- electrical engineering
- plumbing + fire protection
- construction administration

LIRIANO & ASSOCIATES ENGINEERING CONSULTING SERVICES PLLC

Certified MBE – SBE – DBE

We proudly support the American Council of Engineering Companies of New York **ACEC NY**.

CONGRATULATIONS to all this year's awarded

Why us?

FIRM GROWTH

We doubled our staff this year, reflecting the increasing demand for our services and our commitment to empowering a talented and diverse workforce. Our firm has grown from a singular vision into a collective of over 24 full-time, part-time, and seasonal professionals, engineers, technicians, and interns from esteemed local colleges.

EXPANDED OUR PROJECT PORTFOLIO

The company secured high-profile projects, enhancing its reputation for excellence and innovation in engineering and construction. Notably, it secured three contracts with PANYNJ and two consecutive REI requirement contracts with NYCDC, ensuring work for the next 54 months and supporting continued growth and stability.

EMPLOYEE SAFETY AND SUPPORT

Our firm offers a supportive workplace that nurtures community, career growth, and mentorship. By providing direct 24/7 access to ownership and management, we ensure employees feel valued and avoid bureaucracy. We focus on attracting skilled talent and fostering strong client partnerships.
