

Thank you for the opportunity to be elected to the ACRO Board of Chancellors. For nearly a decade, ACRO has been my professional home, and I would be thrilled to help drive its next chapter.

My service on the Annual Meeting Scientific Planning Committee since 2021, and now as co-chair for the 2026 Summit, has been one of the most rewarding parts of my work with ACRO. I've also had the privilege of contributing to the Science and Education Council, collaborating on initiatives that expand ACRO's educational reach and support our members in meaningful ways. These experiences have strengthened my connection to the College and energized my desire to serve in a deeper leadership role.

As a Professor of Radiation Oncology and Residency Program Director at Virginia Commonwealth University, I work at the intersection of clinical practice, education, and workforce development. I bring a perspective shaped by real-world challenges and a strong commitment to preparing the next generation of radiation oncologists. My leadership style is collaborative, steady, and forward-looking, and I enjoy turning creative ideas into practical solutions.

If elected, I would bring:

- Robust experience in medical education, program leadership, and national service
- A record of innovation in curriculum design, virtual learning, and workforce initiatives
- An inclusive, optimistic, and action-oriented approach to leadership
- Deep enthusiasm for advancing ACRO's mission and strategic vision

ACRO plays a vital role in supporting clinicians and championing high-quality, compassionate cancer care. I would be honored to help shape its future and to work on initiatives that strengthen our community and elevate our specialty. Thank you for your consideration.
