

I am honored to be considered for the Board of Chancellors. ACRO's commitment to patient-centered care, practical education, and effective advocacy closely aligns with my professional values and leadership experience across academic, private practice, and large health system environments.

I spent fourteen years at Duke University in a community affiliate practice, where I built a generalist practice and a research career in normal tissue injury and prostate cancer. This experience provided a strong foundation in evidence-based practice, clinical investigation, and education, while also offering insight into the challenges of community-based radiation oncology. I subsequently served as Chief Medical Officer for a large multispecialty private practice cancer organization, gaining experience in physician leadership, quality initiatives, operational strategy, and multidisciplinary collaboration. I currently serve as Medical Director and Chair of Radiation Oncology for AdventHealth's Florida programs, leading a diverse, multi-site department focused on quality, physician engagement, and thoughtful adoption of new technologies.

Radiation oncology faces mounting challenges including clinical relevance, reimbursement pressures, and administrative burden. I believe ACRO must continue to grow its influence as a leading voice for practicing radiation oncologists by expanding membership and ensuring ACRO's educational and advocacy efforts remain practical, relevant, and influential.

Equally important, ACRO must clearly articulate radiation oncology's value – its clinical effectiveness, cost efficiency, and essential role in multidisciplinary oncology – to policymakers, payors, health system leaders, and patients. By championing the value of radiation oncology and countering misconceptions that threaten access and sustainability, ACRO can help ensure our specialty remains appropriately recognized, supported, and positioned for the future.

If elected, I will work to amplify ACRO's voice, deepen member engagement, and advocate decisively for policies that protect access, sustainability, and innovation. I ask for your support to help ensure ACRO remains a strong, visible, and influential champion for our specialty and the patients we serve.
