

Radformation Quality Improvement Grant

Detailed Project Proposal:

No word limit. Please emphasize clarity, succinctness, and readability. Bullet points are OK. Proposals with good writing will be evaluated more positively.

Which of the following applies to your study? (mark all that apply*)

- ☐ Suitability for implementation - local attitudes, willingness to pay, available support, potential cost-effectiveness models based on local workflows
- ☐ Process of implementation - local clinician experience, technical considerations, barriers, successful strategies, scalable models
- ☐ Outcomes of implementation – local clinician experience, objective outcomes, subjective outcomes, cost-effectiveness models
- ☐ Testing a hypothesis related to one or more of the products

* Note: more is not necessarily better. We would rather have one clear, feasible project than a giant overarching mission. It is OK to under-promise and over-deliver. It is OK to speak about your long-term vision as well later in the application.

Background

Please provide the context for your project that will help reviewers to understand why your proposal could promote long-term positive patient impact via improvements in the workplace environment. If your partner site is known, please include any relevant information about the center that could help us evaluate the merit of your project.

Proposal

What is the idea for your project? Be sure to include what, where, how, when, and why.

Deliverable

What is the final deliverable of your project? The deliverable can consist of objective and/or subjective data.

Hypothesis / Hopes

If you have a hypothesis that you are testing, what is it? Whether or not you have a scientific hypothesis, what are the hopes for your project? Feel free to share openly.

Site and feasibility

If your partner site is known, what features of this proposal will make this project feasible? If your partner site is unknown or undecided, what ideal clinic features would make the project most feasible?

Success

Knowing that the project includes a limited, not permanent license for the use of a Radformation product, what does success look like for this project? Help us understand the full breadth of your perspective.

Experience (optional)

Do you have any relevant prior experience that you think will help you be successful? Please keep this section brief (<150 words).
