

Professional Ethics for Engineers and Geoscientists

Professional ethics are the cornerstone of responsible practice in engineering and geosciences. This seminar explores the critical role that ethical standards play in safeguarding public health, safety, and welfare. Engineers and geoscientists are entrusted with decisions that have far-reaching impacts on communities and the environment. As such, ethical conduct is not optional – it is embedded in the standards of practice and regulatory frameworks that govern both professions. The seminar will

- address the importance of integrity, accountability, and transparency in professional conduct, and how these values support public trust.
- reinforce the ethical obligations that come with technical expertise
- examine real-world scenarios where ethical decision-making was pivotal, highlighting the consequences of both adherence and failure
- inspire professionals to uphold the highest standards in their work and to recognize ethics as a vital component of their daily practice
- include a panel discussion and a live question and answer session
- benefit anyone practicing as a geoscientist or engineer
- presented by AIPG past presidents Dawn Garcia and Shanna Schmitt

You will earn 0.1 continuing education unit (CEU) or 1 professional development hour (PDH)

Overview of the different ways that ethics are part of the responsibility of professionals in business & professional areas

Present background information & a summary of ethics related to engineering and geoscience professionals

Panel discussion

Questions from the Audience

When: Mon, Oct 6, 2025, from 3:30 - 5:00 PM @ the Doubletree, 16625 Swingley Ridge Rd, Chesterfield, MO 63017

Registration: <https://aipg.org/event/2025MO>

- This seminar is included in full conference registration
- If you're not registered for the full AIPG conference, the seminar is \$30

For additional questions contact: AIPG National Office @ 303-412-6205 or aipg@aipg.org
