

How Do I Measure Equity in an Audit?

Researchers at the University of Colorado found that social equity/inequity can be measured in four main ways. These measures can be helpful when considering equity in risk assessments and audit planning. For more information and examples, [check out](#) the full article.

Access

Does everyone have equal opportunity to use and benefit from the program under audit?

Quality

Do some groups experience different levels of quality of the services provided by the program under audit?

Procedural Fairness

Are the procedures of the program under audit fair for everyone?

Outcomes

Does the program under audit result in different, unintended outcomes for different people?
