

# Introducing Complex Numbers

**David L. Farnsworth**

*Rochester Institute of Technology*

## Abstract:

A story about introducing a student to complex numbers is presented. The starting point is the solution of quadratic equations, which leads to the acceptance of complex numbers as numbers and the exploration of a graphing technique for them.

**David L. Farnsworth** (DLFSMA@rit.edu) is a professor emeritus in the School of Mathematical Sciences of Rochester Institute of Technology. He earned his BS in physics from Union College in Schenectady, NY, and his MS and PhD in mathematics from the University of Texas at Austin. His interests include teaching mathematics and statistics, especially utilizing the Moore method, and various topics in mathematics and statistics, especially topics that might be approached from a geometric point of view.
