

# Assessing the Performance of the Health Care System in Atlantic Canada

*The Future of Health Care Series: Report 3*

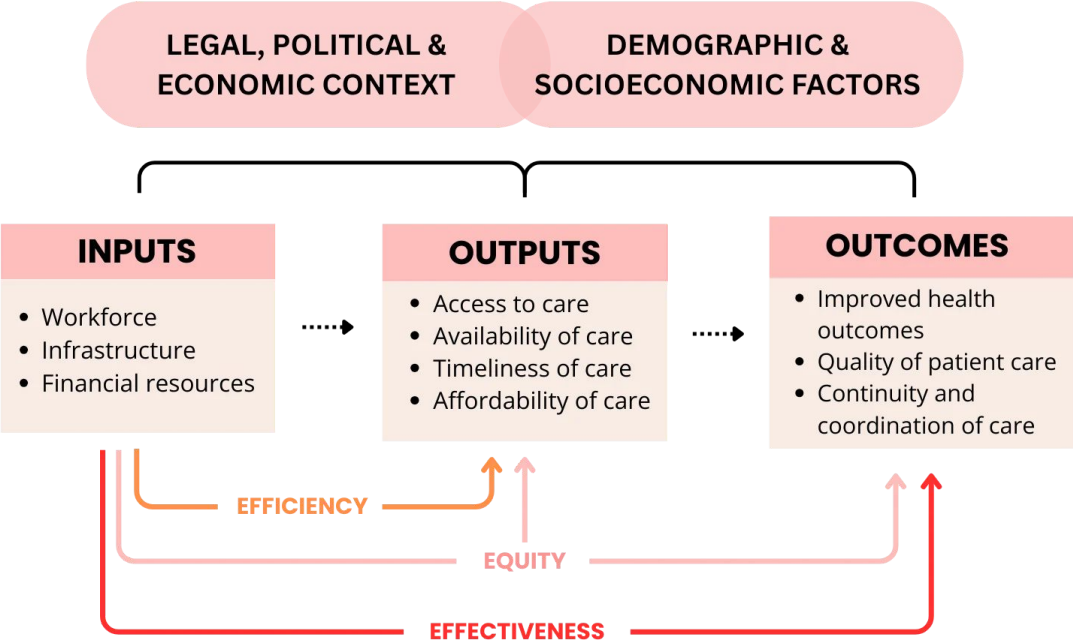

Atlantic Canada **spends more** per person yet outcomes are **weaker**

Increased resources alone **do not** automatically improve performance

## Our Health Care Performance Framework

Measuring a health system’s performance is essential. It helps to identify potential gaps, inefficiencies, and areas of focus that can help enhance the delivery and quality of care.

The Council developed a performance framework to provide a structured approach for evaluating the health care system in Atlantic Canada. To date, no previous research has done this type of assessment for the region.
