**1-Hour On Demand RACE**

Approved CE. Immunotherapy In Practice

Torigen Pharmaceuticals

There are nearly 5x more newly diagnosed veterinary cancer patients in the U.S. every year than human cancer patients. The majority are referred to an oncologist but only around 10% follow through on the referral. So, who is managing the 90% that never consult with a veterinary oncologist?

Join Chelsea Greenberg DVM, MS, DACVIM(O) for this on demand RACE approved educational event. Immunotherapy in Practice, to explore the rapidly emerging options in veterinary cancer immunotherapy.

Join the Movement to Prevent Valley Fever
ANIVIVE Lifesciences

DID YOU KNOW? 25 MILLION DOGS are at risk of Valley Fever (coccidiodomycosis) each year, either living in or visiting an endemic area. In some parts of Arizona, 1 in 10 dogs develop Valley Fever every year.

ANIVIVE Lifesciences and Valley Fever Center for Excellence (University of Arizona) have partnered to develop a vaccine to protect dogs against Valley Fever. Thousands of dog owners have already demonstrated the desire for a vaccine by donating to the Center’s Vaccine Project.

We would like to invite you to join our movement to eradicate Valley Fever by signing our first-to-know access list today.

Please complete our brief survey and sign up today to be on the first-to-know access list when the vaccine is available. Click the button below to help with the survey!

Evidence for Canine Rehabilitation
K9-Mobility: Mobile Canine Rehabilitation

As Veterinarians and supporting staff you understand tissues in the canine including cartilage, bone, muscles/tendons, ligaments, will submit to atrophy if loading is decreased because of an orthopaedic or neurological condition. Comprehension of the changes that occur in a canine with limited mobility or immobilization and the understanding of the timeline of tissue healing helps in the creation of an individualized rehabilitation program to improve tissue quality.

Baseline assessments and progress measurements are clinically relevant to detect client progress and the success of the rehabilitation programs. Several physical modalities can be used in canine rehabilitation, which include therapeutic exercise, manual therapies (stretching/soft tissue mobilizations, etc), laser, PEMF and more. Mills and Ciuperca (2015) state that “Rehabilitation has specific benefits in the treatment of various orthopedic and neurologic conditions.”

If you want to learn more about the conservative management of your canine clients through canine rehabilitation, please reach out to collaborate with me.

Meet Your Provide Practice Lender
Robert Gibson - Provide

Robert Gibson is a regional director of practice finance for Provide, a fast-growing fintech company that helps veterinarians achieve their dreams of practice ownership through people, technology, and comprehensive financial products.

Responsible for the entire Mountain West region, Robert brings to Arizona the strong financial and client relationship management experience he’s earned during his more than 18 years in banking. Robert specializes in helping our communities’ veterinarians obtain loans for their unique business needs and has extensive expertise in practice acquisitions, practice startups, expansion and remodel projects, commercial real estate transactions, and debt consolidations.

Robert has built a network of trusted practice brokers, equipment specialists, attorneys, CPAs, consultants, contractors, architects, and real estate brokers to help ensure his healthcare providers surround themselves with the right team of experts as they embark (or continue) on their practice ownership journey.

Please contact Robert Gibson at 614-572-4357 or robert.gibson@getprovide.com.
**International Best Selling Author of ‘The Evolution of Dog Training’ Shannon Riley Tops Amazon Best Seller Charts and Releases New Course – Truly Force Free Good Manners for Your Dog**

Shannon Riley-Coyner - Truly Force Free Animal Training

The Evolution of Dog Training: From Choke Chains to Clickers. Uncovering the Secrets of Having a Well-Behaved Dog by Shannon Riley-Coyner topped the Amazon charts with 16 achievements including seven No. 1 Best Seller designations in Dog Care and Health, Dog Training, Medicine and Psychology, Animal Husbandry, Dog and Wolves, and Animal and Comparative Psychology. The Evolution of Dog Training was also a No. 1 hot new releases in six categories in the USA including Dogs Care and Health, Dog Training, Medicine and Psychology, Animal Husbandry, and Animal and Comparative Psychology.

The book also ranked in the top 100 for Veterinary Medicine in the United Kingdom and No. 16 for Small Animal Medicine in Canada.

Shannon Riley-Coyner is a Certified Professional Dog Trainer, Registered Veterinary Technician, and Karen Pryor Academy Certified Training Partner. She regularly speaks to an international audience and provides free training for dog owners as well as CEU credits for trainers.

**When is the Ideal Time to Discuss My Healthcare Real Estate Needs**

Matthew Torres - CARR

As a general rule, if you are a tenant or buyer, you should contact a healthcare real estate agent 24 months prior to your upcoming transaction to start establishing your course of action. You are always better to plan ahead and be a little early instead of too late, as timing plays a major role in identifying the top property options available and securing the best possible terms.

Because real estate is typically the 2nd highest expense for most healthcare practices, it’s important to give yourself enough time to create a thorough game plan to execute. Certain transactions can take a significant amount of time to complete, such as: ground-up construction or a ‘build-to-suit’ property. Alternatively, if you are considering a new or additional office, buying a business, company or healthcare practice, or if need more space immediately, simply start the process as soon as you can.

For more in-depth information, visit our blog series titled, "Timing Your Next Real Estate Transaction."
Synovetin OA® is a Unique Way to Treat Elbow Osteoarthritis in Dogs
Exubrion Therapeutics

Synovetin OA® is a unique way to treat elbow osteoarthritis in dogs. It’s not a daily NSAID pill or chew, and it’s not joint surgery. Synovetin OA is just 1 simple, safe, fast, non-surgical injection that gives your dog up to 1 full year of relief. Because Synovetin OA is dosed directly into the elbow joint, it directly targets the source of the inflammation and pain that causes your dog to limp. Furthermore, Synovetin OA is not absorbed into the rest of your dog’s body like traditional elbow arthritis treatments, so you can be confident that it’s a safe and effective choice.

This procedure can only be performed by licensed veterinarians at veterinary hospitals permitted to use internal radiation therapy. On rare occasions, discomfort in the treated elbow has been seen in dogs that can last up to 72 hours after treatment. Short-term home-care instructions must be followed after treatment to minimize extended close contact such as co-sleeping.

To review the full veterinary prescribing information, visit synovetin.com/cpinfo.
