

Introducing HEAL-WA—New Initiative Brings Evidence-Based Health Sciences Information to Health Professionals in Washington State
~HEAL-WA Provides Access to Timely, Evidence-based Resources to Improve Patient Care ~

SEATTLE, WA — January 27, 2009 — A new service aimed at providing health professional with access to evidence-based information is being unveiled throughout Washington State. [HEAL-WA](#) (Health Evidence Resource for Washington) is an evidence-based health sciences information portal developed by the University of Washington Health Sciences Libraries. The HEAL-WA site (heal-wa.org) will provide electronic access to information for many practitioners who do not currently have access to resources through the services of a health sciences library. The site will be funded by an add-on to the license fees of these practitioners.

HEAL-WA is available to all professionals licensed by Washington State as registered nurses, physicians, physician assistants, osteopathic physicians, osteopathic physicians' assistants, massage therapists, naturopaths, podiatrists, chiropractors, psychologists, optometrists, mental health counselors, clinical social workers, and acupuncturists.

HEAL-WA will give these practitioners access to timely, evidence-based resources to help them answer patient care questions. Evidence-based information is designed to make sure that conclusions are drawn from the best-available evidence. The site will include a variety of resources such as online databases, electronic journals and full text articles and electronic textbooks.

The resources have been selected to provide healthcare professionals with the latest information related to diagnosis & therapy, guidelines & evidence, drugs, labs, diagnostic tests, prevention, screening & immunizations and patient care management. Information for practitioners to share with their patients will also be available.

State Representative Eileen Cody, chair of the House Health Care and Wellness Committee, says “The information needs of health care professionals are enormous and ever-changing and evidence-based medicine is becoming the standard. HEAL-WA uses a pioneering approach to

improving access to this information. The HEAL-WA portal is easily accessible and provides such key elements as evidence-based information that impacts patients at the point-of-care, the ability to provide patients with materials that improve their knowledge of a particular condition and access to current journals. Having the site as a destination during the clinical work day brings this type of essential content right where it is needed to practitioners and their patients.”

Improving health professionals’ access to information state-wide was one of the guiding visions of Governor Gregoire’s Blue Ribbon Commission on Health Care Costs and Access. Legislation (Senate Bill 5930), signed into law in May 2007, encourages practitioners to rely on evidence-based information to deliver health care.

###

About HEAL-WA

HEAL-WA (Health Evidence Resource for Washington) is the evidence-based health sciences information portal developed by the University of Washington Health Sciences Libraries in response to Sections 11 and 12 of Senate Bill 5930, which was signed into law in May 2007.
