BVH Integrated Services Enters 2018 with New Connecticut Headquarters

Leading engineering firm expands into state-of-the-art office in Bloomfield and announces leadership changes

BLOOMFIELD, CONN., (January 29, 2018) – BVH Integrated Services, a multi-disciplined consulting engineering firm that provides building and site engineering services, today announced the opening of its new headquarters in Bloomfield, Conn. The new headquarters complements BVH’s other location in Newton, Mass., which also recently underwent a renovation.

The firm also announced the following leadership changes: James W. Ohlheiser, P.E., LEED AP, Chairman of the Board; George Iskra, P.E., Board Member; Karl F. Frey, P.E., CEO; and Thomas St. Denis, P.E., LEED AP, President. Gregory H. Van Deusen, P.E., Senior Vice President, will remain part of the senior management team.

“We are excited to begin the New Year in our new and innovative headquarters,” said Karl Frey, CEO. “The Bloomfield office provides more space to help further expand our workforce, and creates an environment that fosters mentoring, knowledge transfer, and cooperation among the various engineering departments.”

The new Connecticut office is located at 206 West Newberry Road and boasts 24,000 square feet of space to accommodate BVH’s 105 current Bloomfield employees. The building, which was previously the home to CREC Museum Academy for preschool and kindergarten, underwent a total renovation to create a space that meets the needs of BVH’s company culture and engineering process. The new office space includes multiple collaboration stations, state-of-the-art technology, an employee café, and an open floorplan to help foster interaction and creative thinking.

“We sought input from our employees on technology, common spaces, and the open space layout – much of which was incorporated into the final design to ensure the new space would meet the needs and goals of the company,” added Thomas St. Denis, President.

Founded in 1958, BVH has since evolved to become a regional firm with a national reach and a portfolio that includes numerous award-winning projects. This spring BVH will be hosting an open house in its new office space to thank its many clients and to celebrate its 60th anniversary serving the AEC industry.
