

GINGER CHICOS

VDC ENGINEER – GILBANE BUILDING COMPANY

Ginger Chicos brings more than 16 years of experience in Virtual Design and Construction (VDC) and Building Information Modeling (BIM) in the construction industry. Her role in preconstruction and construction spans from upfront planning and schematic design, through creation of construction documents, and administration throughout the construction phase. Ginger is instrumental in creating strategic plans with project teams to address BIM management and communication protocols. She specializes in BIM-related problem solving to ensure a successful collaborative process. Ginger integrates information from the design team and subconsultants to visually communicate construction logistics, scheduling milestones, construction phasing, and trade coordination, enabling the project team to quickly assess activities, impacts, and status of the project. Her role is instrumental in creating a strategic plan with the project teams to address BIM/VDC development, creating detailed, virtual construction models of the project's life cycle to improve the speed and accuracy of estimates as well as optimize construction schedules.
