

JULIA JACK
ASSISTANT PROJECT CONTROLS SPECIALIST – WSP USA

Julia is a multi-talented professional with an outstanding career that followed an unexpected path to where she is today. Having started her career working with several Connecticut Architectural/Engineering Companies, such as JCJ Architecture, The S/L/A/M Collaborative and BL Companies, her career began on the traditional path from Architectural School to work as an Architect in training. But, she would eventually earn an opportunity to work in the Construction Industry as an Owner's Representative. Shortly after that she would journey through the non-profit sector in a dual position as Program Director of Youth Build New Britain and Program Coordinator of Capital Workforce Partner's Jobs Funnel Program, where she was provided the opportunity to mentor and direct young people to achieve the skills and education necessary for employment in the construction trades. Five years later, slightly changing course again, she is now with WSP USA doing work in Project Controls.

Having received her Bachelors Degree in Architecture from Howard University in 1992 and her Masters Degree in Construction Management from CCSU in 2013, she has a combination of experience and technical expertise that spans across generations. Julia is longtime resident of Connecticut and is honored to be the mother of five incredible children, four currently in college and one in middle school. So, the value of mentoring and service has been, and remains to be, a valuable and valued part of her life, both personally and professionally.
