Brain Trauma

60 Seconds

Have you or a loved one had a head injury?

Head injuries, strokes and concussions often cause vision disorders which can interfere with your recovery.

Do you have double vision? Do words seem to move on the page? Or do you struggle with motion sickness? Have difficulty maintaining your balance or lose your place when you’re reading? If you answered yes to any of these questions, this message is for you.

While you may have been told that these symptoms will go away over time, in many cases, they don’t. Yet, these are all signs that you may have a correctable vision problem. You need to see an optometrist who provides an in-office program of vision therapy to get the help you need.

For more information or to find a doctor near you, call (888) COVID-770 or visit COVD dot org, the website for the College of Optometrists in Vision Development that’s COVD dot org or (888) COVID-770.

The College of Optometrists in Vision Development is a non-profit 501(c)(3). We thank you for helping us with our mission of “Improving lives by advancing excellence in optometric vision therapy through education and board certification.”
