AAC Training For Caregivers Of Children With Autism

Who?
Parents or caregivers of children with Autism (ASD) who are currently using a speech-generating device as alternative/augmentative communication (AAC).

What?
Complete 15-20 sessions of caregiver instruction via tele-practice in the comfort of your own home.

Learn about different communication strategies you can use to help your child use their device to communicate.

When?
Sessions will be offered between August 15th – December 1st, over a 6-8 week period. Specific dates and times will be determined upon agreement to participate.

Why?
To learn whether our training can increase your capacity to support your child’s use of their speech-generating device for communication.
