EDM Council Overview
The 300+ global member firms and more than 15,000+ EDM Council members and guests represent a broad range of roles, such as CDO’s, Heads of Data Governance, Data Quality, Data Stewards, Advanced Analytics and Data Scientists, from organizations including banks, asset managers, data vendors, technology companies, consultants, academia and regulators, in financial services, life sciences, manufacturing, automotive and other industries.

The prime goal of the EDM Council, through data management and analytics best practices, is to provide trusted and comprehensive capabilities to meet business objectives.

Best Practices & Industry Workgroups
We define best practice based on what works and what doesn’t in the real world. Our member-driven workgroups develop and continue to update and evolve key initiatives for the benefit of all.

DCAM: Data Management Capabilities Assessment Model
Developed by EDM Council members and first released in 2014, DCAM is the industry standard framework to establish, enable and sustain a mature Data Management and Advanced Analytics discipline. It addresses the required strategies, organizational structures, technology and operational best practices, plus ensures your data can support digital transformation, advanced analytics such as AI and ML, and data ethics.

CDMC: Cloud Data Management Capabilities
CDMC is an extension of the DCAM framework to address the challenges and define best data management practices in the era of Cloud Computing. With a goal to accelerate trusted cloud adoption while maintaining risk and compliance controls in the industry, this initiative’s wide participation includes the world’s top Cloud Service Providers: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP), IBM Hybrid Cloud and 100+ leading industry firms. The CDMC v1 framework was launched in September 2021 as a free license.

ESG Data Management
The ESG workgroup is developing best practices in the identification, collection and use of ESG (Environmental, Social and Governance) data. Participants include major firms cross industry, key data and ratings companies, wealth management firms, leading regulators and standards bodies across the ESG data supply chain.

Data ROI
The importance and relevancy of data management has grown significantly, but teams still often struggle with defining the true ROI of data and data programs. The Data ROI workgroup is working collaboratively with industry leaders and SMEs to develop a standard best practice framework for data management ROI.
Optional Opportunities – Thought Leadership Series
Vendors are invited to extend their sponsorship and increase visibility amongst the membership with these special programs:

EDM Council Thought Leadership Series

1. EDM Council Events Access and Engagement
   - DataVision and savings to external partner events, including the CDO & Data Leaders’ Global Summit and the Women Data Leaders Global Summit with our partner, CDO Magazine
   - Hosting, speaking and sponsorship opportunities

2. EDMConnect™ Access –
   - Engage with the EDM Council Online Community Connect to 15,000+ EDM Council members and guests
