

Module 4

Performable/Best Practice Presentation Guidelines

Instructions:

Please prepare two choices for your presentation which you will be asked for on Wednesday. See below for what we are seeking. Only one will be selected but we are seeking the best balance and groupings of performables. Some of you have found great options of things that others may have passed over so we love having the opportunity to select what will be most helpful. But they all need to relate to tasks/performables.

On the day of the presentations, you will first be divided into smaller groups and will then be presenting a performable from the 30 task model that you have implemented with a client (addict, partner or couple) to the group as a whole. This may be anything from a worksheet utilized, part of an assessment (SDI, PTSI-R, MAWASI, IPAST, etc.), something from the Recovery Start Kit, partner component, etc. We would like you to dig deep, review your manuals (including the Recovery Start Kit manual and the assessment manuals). Often participants bring the foundation items – great and we want to have them too but looking for things like the Mirror of Erised, Soul Window, table technology, Iceberg exercise, Karpman, etc. too.

In your group presentation you will demonstrate how the implementation of the interventions transformed, or changed the cases in some way. The intervention can be with an individual, couple, or family and your job is to teach the group about how you successfully applied material you have learned from the training. One of the main goals of this session will be to learn from one another, so you can be descriptive and creative in the way you choose to present your example and can use any form of media you think would be helpful to demonstrate how you implemented your intervention, addiction timeline, accountability with family, emotional restitution letter etc.) – So even if you have done more with your case, you will only have time to select one. Please try to select an intervention/performable that changed the course of treatment in some way.

You will have a very limited time as a group to present your performable. The purpose of this is to illustrate the application of the performables, NOT to do an in depth case illustration. Once divided into small groups, you will have approximately one hour to discuss each participant's case/performable together in preparation for presenting to the large group. For the presentation to the large group, each small group member will only be provided 1-2 minutes to share the background on the case and 2-3 minutes to describe the performable used. Each small group will also elect a spokesperson who will help sum up what important take-away points were learned in terms of the implementation of the performable(s) (approximately 1-2 minutes). We will then have some brief time for questions/discussion pertaining to the group's presentation (approximately 3-5 minutes).

Group Presentation Outline

The Outline below contains the approximate time allotted for each section and also contains a list of what information should be included in the presentation to the entire group.

Background

1-2 Minutes:

1. Description of the case and treatment unit (individual, couple, family)
2. Diagnosis including main presenting problems and symptoms
3. Duration of treatment

Performable Use

2-3 Minutes:

1. Performable selected – please include time of implementation
(e.g. 10th session)
2. Describe implementation of performable – please share specifics
(e.g. make copies of three circles, describe disclosure scenario etc.)
3. Describe clinical outcome

Summary

1-2 Minutes:

1. After all small group members have shares the 1st two selections with the entire group, a group spokesperson will provide a summary of the take-home lessons learned from the small group discussions of the performables.

Questions/Discussion

3-5 Minutes:

1. An opportunity for brief questions and discussion by large group participants and the facilitators will be provided.
