Paper Title

Author Name

Organization, City, State and Country

Abstract (Heading)
Your paper should begin with an abstract that briefly describes your work. The abstract should be no more than one paragraph long (200-300 words).

Introduction (Heading)
Your paper should contain an introduction that gives an overview of the work you are describing, including a perspective relative to prior work by other authors and an introduction to what is new and significant in this work.

Description of the Work (Heading)
This work must be new and significant. Explain how the results were obtained and the significance of why this method of obtaining the results was chosen. Authors should use headings and subheadings to assist the reader in understanding the material.

Regarding References and Endnotes
Cite all the scientific publications on which your work is based. The format for references and endnotes can be found below. References should be noted in the text with a superscript number. This is an example.¹

Length of Paper
Your paper should cover all relevant aspects in a concise and intelligible form. Please use as many words as needed, but as few as possible.

Paragraph Format (Subheading 1)
This is the standard font and layout for the individual paragraphs. The style is called "Paragraph." The "Enter" key will take you to a new paragraph. If you need to insert a hard line break within the paragraph, please use Shift+Enter, rather than just the "Enter" key.

This is the paragraph spacing that occurs when you use the Enter key.

Equation Format (Subheading 2)
Below is an example equation created with Word 97’s Equation Editor. To move this equation, highlight the entire line; then use cut and paste to the new location. To use this as a template, select the entire line; then use copy and paste to place the equation in the new location. Mark all equations with a number in parentheses, as shown below.

\[ \frac{d[F_1]}{d\omega_2} = SAm_2 \cos \omega. \] (1)

Table and Figure Formats and Instructions (Subheading 2)
Below is an example Table I. Following that is an example Figure 1. Figures and tables, including the respective titles, must be self-explanatory.
Table 1. Title should be above the table

<table>
<thead>
<tr>

Figure 1. Artwork from INMM logo

All figures should be submitted as separate high-resolution (600 dpi or higher) graphic files. TIFF and JPEG formats are preferred. See the Author Submission Guidelines on the INMM website for complete instructions.

Results (Heading)

Outline the research results and discuss their significance. Include a discussion of each table and each figure in the text.

Conclusion or Summary (Heading)

Include a conclusion or summary section that explains what the reader should take away from this article and how the work can be applied.

Keywords

Include a list of three to six keywords from your paper. Keywords are essential for proper indexing of articles.

Author Biographies

Include author biographies. Author biographies should follow the keywords. Please include the authors’ names, titles, employers, and degrees. E.g., Mary Ann Smith is the director of nuclear security studies at the University of Nevada, Las Vegas. She holds a master’s degree in international relations from the National Defense University, and a PhD in nuclear engineering from the University of New Mexico. She is the author of Why Security Matters, published in 2015.

References

All papers must include references. Cite all scientific, technical and other publications that your work is based upon. Format your references as outlined here:
4. www.inmm.org/JNMM/, accessed September 1, 2016. (Format for a Web Citation)
5. Endnotes are acceptable but discouraged. Please include explanatory text in the body of the article when appropriate. (Parentheses may be used, if necessary.) If you must include endnotes, include them with the references.
