Human-Centric AI Summit

Shaping the Future
of Equitable Healthcare

PART OF BOSTON AI WEEK

This Summit convenes Massachusetts health leaders to balance innovation, privacy, patient safety where innovation, equity and human-centered values guide the responsible design and use of AI in healthcare. Participants will leave with practical knowledge, new connections, and actionable ideas for navigating the future of AI in their organizations and communities.

Who is in the room

- Care delivery and clinical/technical leadership
- Health plans and payers
- Public health and government agencies
- Community health and advocacy organizations
- Academic and research institutions
- Health Technology and AI companies
- Philanthropy and health funders
- Legislative and policy stakeholders

KEY TAKEAWAYS

- **90-Day AI Governance Action Plan** tied to improvements in patient safety, workforce trust, and equitable outcomes
- Evidence-based AI practical tools to assess change readiness, measure stakeholder impact, and evaluate value across the health ecosystem beyond financial metrics to deliver human-centered solutions
- Peer intelligence from health leaders across the Commonwealth on shared governance priorities and commitments
- Patient and community voices in the room—multilingual structured listening before, during, and after the Summit brings vulnerable and underserved communities into the agenda, shaping what gets asked and what gets built

REGISTER TODAY

WHY ATTEND

Participants will be immersed with fellow state and community leaders to practice the work of AI governance on actual challenges confronting health organizations today. This is an intentional space to deepen engagement, awareness and knowledge, upskill, and have honest and constructive conversations about early failures in AI adoption that leads to relevant learning and application in their own organizations.

17%

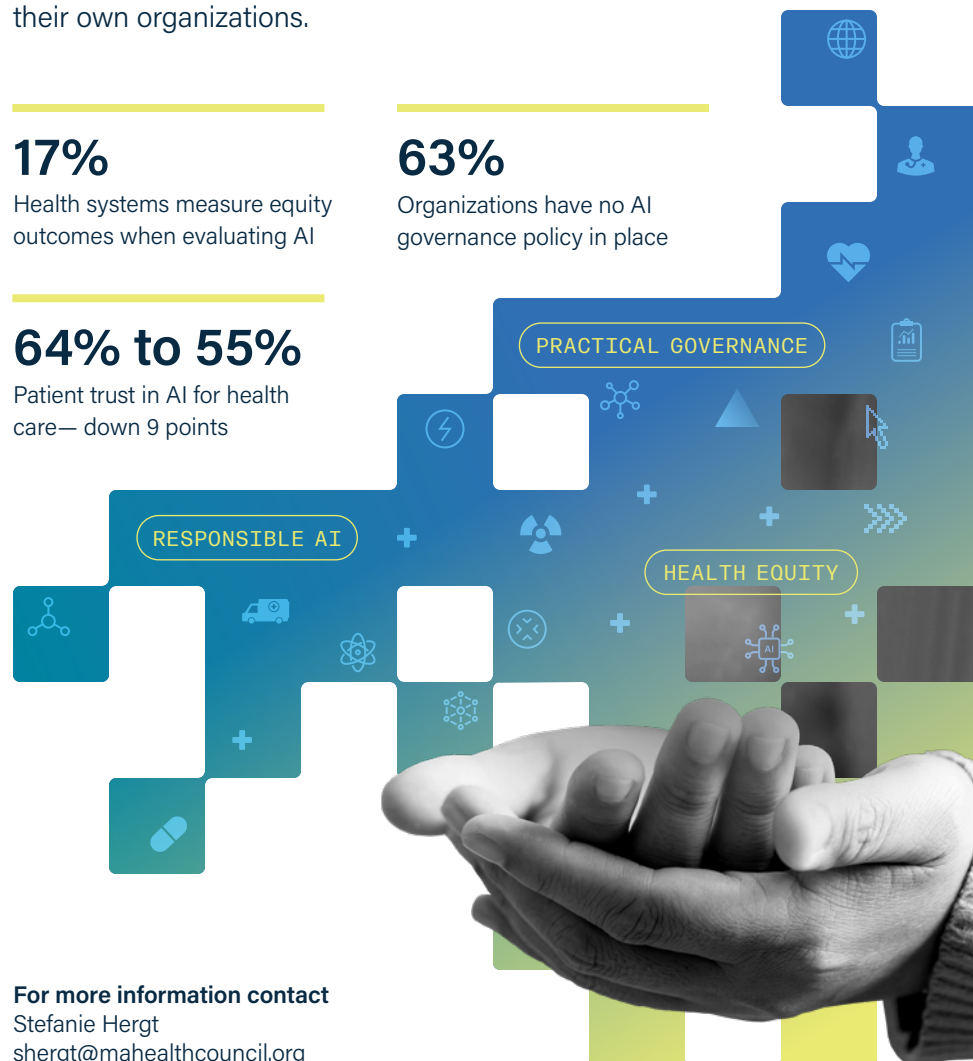

Health systems measure equity outcomes when evaluating AI

63%

Organizations have no AI governance policy in place

64% to 55%

Patient trust in AI for health care— down 9 points
