Hurricane Florence

Current Weather Conditions:
• Scattered showers and storms will increase in coverage this afternoon and evening. Heavy rain across western NC could lead to flash flooding, especially west of the blue ridge. Isolated severe storms are also possible later today, with damaging wind gusts the primary threat.

Highways:
• NCDOT reports there are approximately 272 road closures directly related to Hurricane Florence with more routes being restored daily.
• Multiple North Carolina highways and secondary roads remain closed due to flooding. NCDOT advises motorists to avoid unnecessary travel in the following counties where road washouts have occurred: Brunswick, Columbus, Duplin, Pender, Robeson, Sampson, Scotland, Bladen, and Wayne.

Infrastructure:
• Currently 3 water systems are closed affecting a population of 970, 4 water systems with pressure issues are affecting a population of 21,849, and 28 Boil Water Advisories have been issued affecting a population of 158,050.

Dams:
• HF Lee – WAYNE-031, 032, 033 – Inactive Ash Basins were inundated by flood water. Inspected on 25 Sep. Water has receded below dam tops (crest). Inactive ash basin dikes only received minor erosive damage.
• Sutton – NEWHA-003 - Sutton Lake – DEMLR Staff visited site, 25 Sep, to see installed plug in Sutton Lake southern canal upstream of 300’ breach. Plug is concrete block and riprap at this time. Unable to finish supersack sandbag installation and waterproof blanket due to wind and rain. Duke reported at 1430 on 25 Sep that the river receded and stopped flowing over bay 5/6 of Sutton Lake dam. This new area did fail over a reported length of 200’-300’. Duke is working on a plan to plug this breach as well.
