The Luck of the Draw

How to survive a JCAHO Mid-Cycle Survey

Jack Gosselin, Vice President of Facilities Management at Day Kimball Hospital in Putnam, CT recently experienced a “surprise” visit under the JCAHO verification program. He wrote to share the results of this visit and survey with us.

The Lucky 5%

It is common knowledge that JCAHO has instituted a verification program, officially termed “A random unannounced mid-cycle survey with 24 hours notice.” The survey randomly targets 5% (although we understand that it is less) of the accredited institutions at the 18-month mark between triennial surveys. In late January, we were the “lucky” recipients of this focused survey.

Five Card Draw

The solo administrative surveyor announced his pending arrival exactly 24 hours prior by phone. Aside from arrival time, he outlined the five areas the survey would focus on: Special Treatment Procedures, Environment of Care, Infection Control, Credentialing, and Competence assessment. These areas are currently producing the most Type 1 recommendations nationwide and presently are the only standards slated for review.

According the the surveyor, his visit is independent of the normal accreditation process and he has no knowledge of pending recommendations or contingencies. A two-hour tour was followed by a one-hour office-based policy/procedure review.

Putting our cards on the table

The compressed schedule EC.1 (design is the only Environment of Care standard surveyed, as it provides the core of the new accreditation strategy. Throughout the tour and static review, the emphasis on performance measures (EC.1.5) monopolized the discussion. Management program performance measures must be developed, implemented, monitored, and documented for all plans from safety to utility systems. Random staff interviews by the surveyor will help verify performance criteria prior to the review of documentation.

A completed Statement of Conditions was requested during the survey. It is our...
NEHA Convention features Computer-aided Facilities Management

The New England Healthcare Assembly (NEHA) will be hosting its annual meeting during the week of April 10 in Boston at the Hynes Convention Center. On Wednesday, April 12, the New England Hospital Engineers Society will host a morning educational seminar covering CAFM (Computer-aided Facilities Management). With the increasing demands on us all to operate more efficiently, accurately and effectively, this topic is timely and necessary to a well-run operation.

Our faculty are from Computersmith, Inc. located in Hudson, NH. The two presenters are Sales Manager Larry Nutil and Software Technician Mark Scott. We have surveyed quite a few of our members and have designed a program which will benefit us all.

The low cost of just $40.00 for NEHAES members and $65.00 for non-members includes a continental breakfast during registration and lunch following the seminar. The non-member fee includes a one year membership in NEHA if you are eligible. You will find this a great opportunity to network with your peers while gaining information critical to your daily operation.

**AGENDA FOR WEDNESDAY, APRIL 12, 1995**

- 8:00 a.m. - 9:00 a.m. Registration
- 9:00 a.m. - 12:00 noon “Computer-Aided Facilities Management (CAFM)”
- 12:00 noon – 1:30 p.m. Luncheon
- 1:30 p.m. – 5:00 p.m. Visit the Exhibits and Bookstore
- 2:30 p.m. – 4:00 p.m. General Session – “Creating Community Based Health Systems: New Solutions for Managed Care and Capitation”

If you need a NEHA Annual Meeting Registration Form, Contact Kurt Peterson at (603) 882-3000. Hope to see you at NEHA!

Setting the Standards that Govern Our Facilities – A History of the JCAHO

A two-part article submitted by Greg Oles, Franklin Medical Center, Greenfield, MA

How did the JCAHO come into being, and how did it grow into the powerful and influential standardization organization that affects our jobs daily as facility managers?

**From humble beginnings**

The JCAHO was just the seed of an idea back in 1917. Following the Conference on Hospital Standardization, the American College of Surgeons established the Hospital Standardization Program and began reviewing hospitals. Two years later the results of these reviews were announced by Dr. Boyman, who told the audience present that of the 692 hospitals that were reviewed, only 89 of them met the standards. Although the College made the numbers public, they burned the list in the furnace of the Waldorf Astoria Hotel to keep the press from getting it. Following the review, 109 of the previously failed hospitals corrected their deficiencies and were subsequently approved.

**The first set of minimum standards**

In 1919 the College's Board of Regents adopted five official standards for the program known as “the Minimum Standards”. Dr. Franklin Martin outlined them as follows:

- Safeguard the care of every patient within a hospital by insisting upon competence on the part of the doctors, and upon adequate clinical and pathological laboratory facilities to insure correct diagnosis; by a thorough study and diagnosis in writing for each case; by a monthly audit of the medical and surgical work conducted in the hospital during the preceding interval; and by prohibiting the practice of the division of fees under any guise whatsoever.

**The first printed manual of standards**

It took until 1926 for the first standards manual to be published by the College. It consisted of 18 pages.

**The JCAHO gets its’ name**

By 1950 the number of approved hospitals had grown to 3,920, over half the hospitals in the United States. The College of Surgeons had already invested $2 million in the program and could no longer support it alone. And as medical care was changing rapidly, the standards needed to be revised, expanded, and updated, with the scope of the survey extended.

On December 15, 1951, the American College of Physicians, the American Hospital Association, the American Medical Association, and the Canadian Medical Association joined the American College of Surgeons to form the Joint Commission on Accreditation of Hospitals as an independent, non-profit organization for voluntary accreditation.

**Standards are added for facilities**

In 1953 an update of the Hospital Standardization Program was published by the Joint Commission. For the first time the program included standards on a hospital governing body, bylaws, buildings, dietary services, drug control, and nursing services.

Part two of this article will appear in the next issue of the NEHA newsletter. Thanks Greg for providing us with some historical perspective!
