Greetings from Vancouver!

Greetings from Saskatchewan!

I think I just heard her say that "some of my cells have a Y chromosome". So is she a chimera (identical twins result when one embryo splits into two; a chimera results when two embryos fuse into one)?

Should have gone to everyone: I appreciate the preparation you brought to my question!

What were her biological organs with some cells with a Y chromosome? Why was she bullied?

Are angels sexed?

No reason to entertain hypothesis of chimerism wrt transgender

The same is happening with the sweep of anti-trans legislation in the U.S. currently.

Thank you Megan for the compassionate exposition of this topic. Also thanks for the good discussion.

It is on the DDD webpage.

There is no sweep of anti-trans legislation, Dana. Just legislation to protect women and children from harm.

Ethnographic and phenomenological study has documented such violence to this population for many years.

Everybody, we already have a lively discussion going on in the forum so please come and join us.

Thank you for your participation today at the September DDD event. See you in October!

Thank you Megan!

Thank you everyone. I think about the principles of prudence and the cautionary principle related to decisions!
