1. Old Business
   a. Releasing Time to Care: The present process is not following Lizzie Cunningham's model. The process is designed for nurses working from the bottom up to change impediments for nurses to deliver patient care efficiently. The management team involved has not been able to clarify the process for the next group of nurses scheduled to attend the conferences. The 2 nurses have not been able to find the conference site.

2. New Business
   a. Releasing Time to Care process in OB has had favorable outcomes. Nurses report the use of the red mat in front of the Pyxis (no one is to talk with a nurse standing on the mat to reduce interruptions and possible medication errors) has been very favorable. The OB nurses do feel the process has been fragmented and the nurses are having difficulty with implementation of suggested changes.

   b. Float levels and float policy discussed for clarification on consistent utilization.

   c. AORN has upcoming webinars available regarding recertification. Legacy hospital has an upcoming conference with continuing education hours available. The brochure is posted in the Operating Room.

3. Next meeting will be February 8, 2012.
