

PHSS Aseptic Processing Workshop Syndicates 2020

After the success and sell-out of the PHSS Aseptic Processing Workshop last year, please find the 2020 information...

The PHSS Aseptic processing workshops are run as a syndicate where simultaneously four workshops per day are run with four groups of attendees moving through each workshop in sequence. The workshop training is completed over two days so in total eight workshops are completed for each attendee.

Workshops will each be limited to 20 attendees, with a total of 80 attendees per day.

Each training day starts with a Key note presentation for all attendees below the four training syndicate groups are formed.

Workshops will have a lead trainer with support trainers (1 or 2) and are intended to be practical guidance where equipment is used for hands-on/ demonstration to increase learning and engagement.

Sponsors support workshops with equipment and specialists in the technology or consumables used in the training.

2020 Workshop Syndicates

- Environmental classification and qualification.
- Moist heat sterilisation.
- Isolator Barrier technology: types, applications and contamination control attributes in Aseptic processing.
- Containment and cross contamination control of biologically active and toxic products.
- Cleanroom garment selection, gowning Qualification and Cleanroom behaviour.
- Manual cleaning and disinfection.
- Environmental monitoring risk assessment for filling lines at design stage of sampling site integration.
- Single use and ready to use systems and product containers - key considerations in Aseptic processing.
