BUILDING THE FUTURE OF HEALTHCARE

SIIM Hackathon

The Standards
SIIM's Hackathon focuses on new standards like HL7 FHIR™, DICOMweb™ and our own SWIM™.

Hackathoners?
Hackathon brings together coders, CIOs, physicians, technologists, and more!

Find an idea
Review list of suggested projects or think of another problem you want to solve, workflow to improve or something entirely new!

Beat the clock
APIs are available 24/7 in the cloud, but your prototype must be ready in time for judging.

Have fun!
Don't forget to network, make connections and share the knowledge. Specially at the Hackathon Social Event.

Prototype
Form a team, start on your own, or ask for a partner; and build a prototype to demonstrate your idea!

Judging Panel
A diverse panel from medical, technical, academic, business & standards backgrounds evaluate the prototype.

Winner is chosen!
An award will be presented to the Best Project.

Going beyond
SIIM will keep those APIs running 24/7/365 beyond the annual meeting so you can do more hacking afterwards!
