Industry Questions

- What finish is harder? Water-Based or Oil-Based?

Industry Questions

- What are the health effects of Isocyanate and Aziridine cross linked finish products?
 - What products/techniques help combat against these chemicals?

Per- and Polyfluoroalkyl Substances (PFAS)

- What are PFAS?
 - Synthetic chemicals that resist grease, oil, water, and heat
- Where are they found?
 - Stain, some finishes, cleaning products, paints
- What environmental and health risks can they lead to?
 - “Forever Chemical” Easily absorbed through skin, linked to many different cancers.

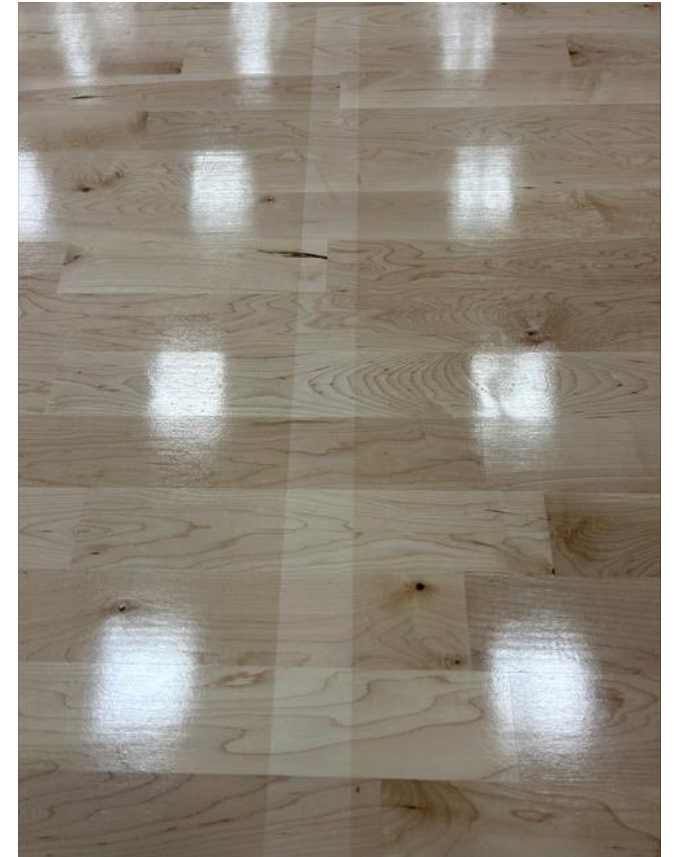

Industry Questions

- Can Tempura paint etch finish? And if so, how can we provide another solution for temporary lines?

Tape on a Gym Floor

The Sports Flooring Authority

888-480-9138
mfma@maplefloor.org

Tape on a Maple Floor

MFMA does not recommend the use of masking, theatrical, construction, electrical, duct, adhesive or any other kind of tape to mark temporary court boundaries on the surface of a finished maple floor. It is likely that the tape, when removed, will peel away layers of the floor's surface finish. Most tapes promoted for temporary markings have a different coefficient of friction than finishes applied to the maple playing surface, and can impact a person's ability to start, stop and pivot. Removing the surface paint/finish and exposing the maple can result in additional chipping and peeling of the remaining paint/finish in adjacent areas.

In addition, most commonly available tapes contain adhesive resins that can etch or stain the floor finish or even the maple flooring below the temporary markings.

If you have additional questions, please contact MFMA's Technical Director at 888-480-9138.

Revised 12/09
