SCIENTIFIC PROGRAMME

World Association for Infant Mental Health

Sixth World Congress

Tampere, Finland
July 25–28, 1996
Foreword

The first initiative to hold the Sixth WAIMH World Congress in Finland was already taken in 1989. We are enormously happy to now be in Tampere and enjoy the city and its surroundings as well as the programme that has taken its final shape now. The theme of the Congress is a very specific one: Early Intervention and Infant Research: Evaluating Outcomes. It was chosen because we felt that the time was ripe to contribute with new clinical and research knowledge to the ultimate goal in our field of helping as many infants and their families in distress as possible. We received more than 500 submissions to the programme and are especially glad for the many joint international contributions.

The special subthemes of each day are as follows:

Thursday: Theories of Early Intervention
Friday: Techniques of Early Intervention in Different Situations
Saturday: Evaluating and Follow-up of Intervention
Sunday: How to Learn and Teach Early Intervention

The Programme Committee accepted 40 Symposia, 52 Workshops, 19 Teach-ins, 206 Posters, 8 Poster-workshops and 22 Video presentations. Because of the high number of submissions it was necessary to change the format of many proposals in order to include as many high quality submissions as possible. Because of this, we decided to introduce a new format, called Poster-workshop. The goal of a Poster-workshop is to assemble posters around a common theme. Poster-workshops are scheduled for 75 minutes. The discussant provides 15 minutes general overview, followed by an open review of the posters. Presenters are expected to be at the poster for the full session.

We hope that all of us will have a successful and pleasurable congress, and that we all may enjoy the long days and beautiful nights in Finland.
