Agenda

- Defining an Effective EdTech Ecosystem
- 6 Suggested Steps for Building a More Effective EdTech Ecosystem
- Key LearnPlatform Capabilities
- Product Demonstration
- Q & A
What do we mean when we talk about an Effective Edtech Ecosystem?

Do you have processes and mechanisms in place to ensure the education technology used in your district is...

- Safe
- Equitable
- Effective
6 Steps for Building a More Effective EdTech Ecosystem

1. Get Organized
2. Communicate and Share Information
3. Streamline Your Processes
4. Ensure Compliance
5. Analyze Your Digital Resources
6. Apply Your Findings and Improve
Organize & Communicate

Get Organized
Create a single source of truth for edtech resources and materials, aligned with strategic and local needs, for efficient management and oversight.

Communicate and Share Information
Provide structure from the district level, while sharing resources and easing access for teachers and families. Support local control with opportunities for school leaders and teachers to share feedback.
Streamline & Comply

Streamline Your Processes

Standardize, simplify, and increase the transparency of district processes for edtech requests, contract management, product vetting, procurement and implementation.

Ensure Compliance

Build compliance with state and federal regulations as well as district requirements, such as data privacy, cyber security, reporting and accessibility, into district processes.
Analyze & Improve

Analyze Your Digital Resources

Understand the effectiveness of your edtech investments by analyzing fidelity of edtech usage, impact on student outcomes, overall equity, and student and teacher experience.

Apply Your Finds and Improve

Apply findings to improve instructional practices, financial and budgetary decision-making, operational policies, and strategic plans. Monitor the effectiveness of these initiatives over time.
How LearnPlatform helps you build a more effective edtech ecosystem.

✓ Configure and share a district edtech library with approval & privacy statuses.
✓ Provide direct access to privacy insights from trusted third parties, including SDPC.
✓ Create a public edtech library for parents that includes required and helpful information on classroom edtech use.
✓ Centrally manage vendor contracts and costs.
✓ Gather structured feedback from teachers on specific edtech products.
✓ Standardize the edtech request process and automate the review process.
✓ Manage vendor communications from the very beginning.
✓ Analyze the fidelity of edtech product usage, cost-effectiveness and efficacy.
