In most other continuing education orthodontic programs, dentists usually work on typodonts.
In this course, you will be working on live patients.

Advantages of working on patients

• Get to treat the entire case from start to finish, from diagnosis to retention
• Typodonts do not react like patients.
• Typodonts do not have expectations, profiles, they do not eat, and they do not have to wear elastics.
• About 70% of orthodontics is trouble shooting. In other words, the teeth do not always move like you want them to, so you have to make corrections during treatment to compensate.
