Additional comments regarding the RPR Training including updated format with separated new and experienced RPR tracks:

Responses

You missed the mark. Workshop developed for everyone except RPR. You need to put yourself in the RPR position and give the experience on how to run the project rather than how it was developed.

Don't talk about specific issues, it's more beneficial to understand how you want the job run as opposed to what type of asphalt failures there are

Find a way to possibly make it more interactive or incorporate the Poll software into more presentations, if you plan to use it in the future.

Form examples in handouts to refer to during lectures in the tracks

Faster pace

Getting rid of part time inspection

New per reporting changes

Examples of field paperwork required

Examples are always helpful

Better photos/video

Have a similar training session for contractors so their are no excuses for not knowing DPW expectations

Shorter traffic...more FCR

Determination of foreseen vs unforeseen changes.

Have some contractors attend so they know that you're telling us.

Lessons learned always good info.

Shorter sessions for specialized topics.

Shorter tracks but keep everyone together rather than separate tracks

You are doing a great job

Live field training

Foreseen vs. Unforeseen change order items
