SEA 362 (specifically IC 13-18-26) becomes effective for some drinking water and wastewater permitting activities issued after June 30, 2018. Due to the fact that IDEM is in the process of developing protocols for implementing SEA 362, IDEM will continue to process and issue permits during the protocol development phase as normal (pre-SEA 362). Once IDEM has developed the implementation protocol, we will engage in education/outreach to assist potential applicants moving forward. With that being said, IDEM encourages applicants to address the requirements of SEA 362 to the best of their ability in the interim.
