The American Council of Engineering Companies of Pennsylvania (ACEC/PA) is the only association devoted exclusively to the promotion and enhancement of the business interests and profitability of engineering firms with offices in the Commonwealth of Pennsylvania. Our goal is to enable member firms to provide quality engineering services in the best interest of their clients and the public.

ACEC/PA’s member firms offer engineering expertise in a wide range of disciplines, including civil, structural, mechanical, electrical, environmental, industrial, surveying and mining. The firms range in size from a single professional engineer to corporations employing thousands of professionals with offices throughout the nation and the world.

What We Support:
A long-term, sustainable, inflation-sensitive, comprehensive and fully integrated funding solution incorporating all modes of transportation for the Commonwealth.

The August 1, 2011 Transportation Funding Advisory Commission (TFAC) Report recommended new funding ($2.0-$2.5 billion), modernization and a decade of investment. ACEC/PA supports the TFAC Report’s specific funding sources including a long-term, comprehensive solution for all modes of transportation. Other items ACEC/PA Supports include:

* Work-zone Speed Enforcement (SB 172) passage.
* Moving the Pennsylvania State Police costs from the Motor License Fund to the general fund; utilizing the continued phased approach.
* Reallocation of Act 44 revenues as it comes to an end in 2022.
* ACEC/PA supports P-3 legislation for new asset creation; however ACEC/PA recognizes that the majority of transportation funding has and will come from the public sector, and should only be considered with an increase to the general transportation trust fund. P-3 legislation is an important tool but will not solve the funding crisis.
* ACEC/PA supports tolling, congestion pricing, and development of a mileage based registration fee to replace the gas tax as primary transportation infrastructure finance tools.
* ACEC/PA supports a study on Vehicle Miles Traveled (VMT) as a replacement for the current Motor License Fund.

ACEC/PA represents consulting engineering companies, affiliates and various other partner organizations/companies in the Commonwealth.

We are 125 companies (engineering member firms).
We represent over 14,000 employees across the Commonwealth.
