Participants needed to help understand listening-related fatigue in children!

What is Listening-Related Fatigue?
Listening-related fatigue is a feeling of tiredness caused by straining to listen and understand.

Listening-Related Fatigue & Cochlear Implants
We are interested in understanding how getting a cochlear implant influences listening-related fatigue.

Who Qualifies for the study?
- Children 5-17 years old
- Receiving 1st, 2nd, or bilateral cochlear implants

What does participation look like?
- Complete 4-12 surveys across 12 months (pre and post surgery)
- Surveys take 10-15 minutes and are completed over video call
- Earn Amazon gift cards ($10/survey)
