Washington, DC 20510

The Honorable Patty Murray  
Ranking Member  
Subcommittee on Labor, Health &  
Human Services, Education, and Related  
Agencies  
Committee on Appropriations  
U.S. Senate  
Washington, DC 20510

Dear Chairman Blunt and Ranking Member Murray,

On behalf of the undersigned organizations, we urge that you fully fund programs in the Health Resources and Services Administration's (HRSA) "Public Health Workforce" line item in Fiscal Year 2018 (FY18). Funding for Preventive Medicine Residency Training Programs and Public Health Training Centers is pivotal to assuring a well-trained public health workforce equipped to address social determinants, other drivers of health care spending, and to advance the research, training, and action necessary to protect and promote health for all our citizens.

The recommended levels of funding for FY18 are:

- Preventive Medicine Residency Training Programs: \$12,000,000
- Public Health Training Centers: \$9,864,000

Funding for Preventive Medicine Residency Training Programs supports post-graduate physician training by funding the planning, development, operation, and training of preventive medicine residents in accredited programs. Preventive medicine physicians are uniquely trained in both clinical medicine and public health to promote and maintain health and well-being and reduce the risks of disease, disability, and death in individuals and populations. As our health care system is increasing its emphasis on improving health outcomes among defined populations, these residency training programs provide a blueprint on how to train our future physician workforce.

Preventive medicine residents are the only medical residents whose graduate medical education (GME) costs are not fully supported by Medicare or Medicaid GME funding. Today, roughly half of the accredited slots for preventive medicine residency training programs go unfilled due to lack of funds to

offset residency training costs. With the \$4 million cut to the program in the Fiscal Year 2017 (FY17) budget, Preventive Medicine Residency Training Programs are forced to turn away highly-qualified physicians who want to improve the health of populations, rather than care for one patient at a time, and less able to train the public health professionals the country needs. With [21 Senators](#) advocating for a funding level of \$12 million in FY18 for the program, it is clear that this program needs funding restored to meet the needs of the public health workforce.

The Public Health Training Centers (PHTCs) Program provides grants to accredited schools of public health to provide graduate or specialized training to frontline public health workers and managers in state, local, and tribal health departments and public health agencies. According to surveys from the Association of State and Territorial Health Officials (ASTHO) and the National Association of County & City Health Officials (NACCHO), over 51,000 state and local public health jobs have been lost to budget cuts since 2008, or about 19 percent of the workforce. These reductions, coupled with the evolving field of public health, require public health workers to learn new skills and master new approaches through ongoing training.

New threats arise, such as the recent Ebola and Zika outbreaks, which require the rapid deployment of specialized training that the Centers can provide. During the Ebola crisis, the PHTCs worked with HRSA and the Centers for Disease Control and Prevention (CDC) to consolidate knowledge about Ebola response trainings and resources to the public health workforce. The coordinating center and the PHTC's developed and distributed educational and training resources to address the threats.

The President's budget calls for eliminating the Public Health Workforce Programs. With the rise in chronic diseases and the public health crises such as Zika that always loom on the horizon, it is time to expand – not shrink – the training of physicians and other public health workers in disease prevention and health promotion.

Sincerely,
