This GUIDE was prepared as a public service by the Association of Collegiate Schools of Planning (ACSP), a consortium of university based programs offering degrees and credentials in urban and regional planning. ACSP hopes to encourage a wide range of high school and undergraduate students to consider a rewarding and challenging career in planning.

ACSP promotes education, research, service, and outreach in the United States and throughout the world by seeking to:
• recognize diverse needs and interests in planning;
• strengthen the role of planning education in colleges and universities through publications, conferences, and community engagement;
• improve and enhance the accreditation process, and;
• extend planning beyond the classroom into the world of practice.

If you are interested in a career in which you can help your community, influence the direction of growth and change, and build a better future, you should read this GUIDE.

OBJECTIVES
This GUIDE is designed to show you:
• how fulfilling a career in planning might be;
• the wide variety of jobs which urban and regional planners do;
• the kind of education and training you need to become a planner;
• the range of universities which offer planning education and training; and
• how you might choose a university planning program matched to your interests and needs.

IS PLANNING THE CAREER FOR ME?
• Are you interested in positive social, economic, environmental, and physical change?
• Do you want to work with people from various backgrounds to develop a better community?
• Do you like to communicate with others about ideas, programs and plans?
• Are you challenged by complex problems and excited about being part of a cooperative process to devise solutions to those problems?
• Do you think about the future? About what could be rather than about what is?
If you answered “YES” to any of these questions, you should seriously consider becoming a planner!

WHAT DO PLANNERS DO?

Planning is a systematic, creative way to influence the future of neighborhoods, cities, rural and metropolitan areas, and even the country and the world. Urban and regional planners use their professional skills to serve communities facing social, economic, environmental, and cultural challenges by helping community residents to:

- develop ways to preserve and enhance their quality-of-life;
- find methods to protect the natural and built environment;
- identify policies to promote equity and equality;
- structure programs to improve services to disadvantaged communities, and;
- determine methods to deal effectively with growth and development of all kinds.

Urban and regional planners do many types of jobs and are involved in almost any kind of government or private activity which seeks to affect the future or respond to community change. The majority of planners work in traditional planning areas such as land use, environmental protection, economic development, transportation, community design, housing, and social planning. However individual planners can still have a wide variety of responsibilities within these broadly defined specialties. Other planners work in less traditional areas, often with people from other disciplines, such as healthy communities or energy development or school planning. Some planners become generalists. They develop a level of expertise in several substantive areas. Others become specialists and define themselves as housing or transportation or environmental planners.

Most planners share a common set of skills and values even though they may specialize in one or two substantive areas. Using their “planning toolkit” they:

- involve all affected parties in important planning decisions;
- help communities develop their own vision of the future, preparing plans responsive to shared community objectives;
- analyze qualitative and quantitative information to suggest possible solutions to complex problems;
- evaluate the cost-effectiveness of proposed projects and plans; and
- present recommendations to public officials and citizen groups in a comprehensive and understandable way.

Planners work in government, with non-profit agencies, and in private industry. Those in the public sector often work for city or county governments or regional planning agencies but there are also planning jobs at the State and Federal level. International organizations like the United Nations and the World Bank also hire planners. Planners with jobs in the private sector can work with utility companies, law firms, real estate developers, and planning consultants. Planners also work in the non-profit sector and with non-governmental agencies like the United Way or community development organizations or advocacy groups for the elderly.

In their jobs, some planners have responsibility for specific geographic areas such as individual neighborhoods in a city or region; within those areas they may provide assistance on a variety of substantive issues from land use to transportation. Other planners have substantive responsibilities—such as housing or environmental planning—and provide assistance in their specific specialization to many communities within a city or region. Some planners work on projects which will be undertaken within a year or two while others focus their efforts on projects many years in the future.

Today, planners may move back and forth between jobs in the public, non-profit, and private sectors over the course of their career. They may also work for different levels of government at different times. They may change their specialties or their focus long after they leave school in response to on-the-job experiences, or the opportunity for new challenges.

While you may think of planning as an urban activity, it actually occurs in communities of all sizes. Many planners work in small cities, in rural areas, and for Indian Nations. Others work in suburban neighborhoods at the periphery of large regions while still others have jobs in the dense core of major metropolitan areas.

In the next few pages we’ll describe the most common planning specialities.
PLANNING SPECIALIZATIONS

Land Use Planning

Most planners are involved in this, the most traditional kind of planning practice. At the same time, there are many different kinds of land use planning jobs. Some land use planners develop ways to encourage growth or development in certain communities or along appropriate corridors while others work to discourage growth in environmentally sensitive areas or where supporting services cannot be effectively provided.

Some land use planners work on long-range comprehensive plans which are designed to coordinate all the important activities in which a community engages—housing, recreation, transportation, water and air quality, and so forth. Some land use planners help develop or administer local regulations which establish the kind of housing, industrial, and retail facilities which can be built in the city. Others develop ways to finance public services while still other land use planners evaluate the impact of proposed residential or commercial development and suggest ways for communities to respond.

Many land use planners coordinate their activities with other kinds of planners in order to protect open space and agricultural land in the face of increasing demands for new homes and businesses.

Environmental Planning

Environmental planners work to enhance the physical environment and minimize the adverse impacts of development. Some environmental planners focus on scientific and technical questions while others develop policies and programs to encourage the public to protect natural resources. Some planners develop expertise in one aspect of resource management while others attempt to identify the environmental implications of a range of government polices or proposed land use changes.

Some environmental planners focus on cleaning up polluted areas or resources while others focus on preventing contamination and the destruction of ecosystems.

Many environmental planners work to integrate a concern about pollution and the conservation of non-renewable resources into the plans developed in other substantive areas like transportation or economic development.

Economic Development Planning

Economic development planners, in North America and internationally, work to improve a community or region by expanding and diversifying the economic activities which support the families living there. Many planners do so by helping develop plans to attract businesses which create new jobs and provide additional tax revenues; others work to keep businesses from leaving distressed areas.

Economic development planners at the local level often work to promote the special features of their community, sometimes by encouraging tourism or additional recreational opportunities. Some planners develop projects which bring housing and commercial enterprises as well as jobs into disadvantaged neighborhoods. Some economic development planners help communities find ways to finance the cost of new development while others work to overcome regulatory and other barriers to new projects.

Economic development planners often work in conjunction with land use, housing, social and community planners to address the needs of distressed communities or declining business districts.

Transportation Planning

Transportation planners help develop programs to meet the current transportation needs of families and businesses, locally and across a region; they also attempt to predict future travel patterns in order to identify the need for additional transportation services and facilities. Some transportation planners are very technically oriented and work with advanced computer technology; others deal with the social and economic aspects of travel. Some focus on one mode such as cycling or public transit while others attempt to plan for multiple modes.

Transportation planners working for local governments often respond to traffic congestion; others develop ways to finance new facilities. Some transportation planners help develop programs which are designed to encourage people to drive less, or which provide home-to-work options for welfare recipients trying to find jobs, or which organize special transportation services for the elderly.

Many transportation planners coordinate their activities with environmental, land use, and economic development planners.
Housing, Social and Community Development Planning

Many planners practice in these overlapping areas. Housing planners help develop strategies to increase the supply of affordable housing and expand home ownership among low income or disadvantaged groups. These planners often try to create incentives and remove constraints on private home builders or work with public or non-profit organizations to build housing units for low income families or senior citizens.

Many housing planners try to encourage mixed use developments offering services and jobs closer to where people live; others promote projects which provide housing opportunities for people from a mixture of income levels. Planners concerned with the social aspects of a community often combine their interest in housing with efforts to increase the overall quality of life in poor or minority neighborhoods.

Many social and community planners work to improve multiple aspects of a targeted neighborhood, combining many substantive planning skills from economic development to urban design. For example, community and social planners may work to improve transit service in disadvantaged communities or develop job training programs for unemployed residents or provide better public health facilities in low income neighborhoods. These planners often work with land use and transportation planners.

Other important planning jobs

In addition to the substantive areas described above, you can find planning jobs in:

- public health
- historic preservation
- coastal management
- mediation and negotiation
- criminal justice
- public finance
- public policy and management
- urban design
- elementary and secondary education
- labor force development
- human services
- law

WILL I GET A JOB? YES !!

Planners continue to be in high demand throughout North America. There are promising career opportunities in every planning specialization, although sometimes there is more need for one specialization than another. Most planning programs help you get a “jump start” on finding a job at graduation by involving you in real-world planning projects and by encouraging or requiring you to do a planning internship as part of your education. These activities show you how different kinds of planners actually do their jobs, as well as giving you the opportunity to interact with practicing planners who might offer you a job when you graduate. In fact, many planning internships turn into full-time jobs after graduation.

Planning is a great career for women and people of color. Just under 40% of those hired as planners are women and there are few salary discrepancies between men and women entering public services. While only 7% of practicing planners identify themselves as members of minority groups, this number is growing. Many planning programs strongly encourage minority students of every type to obtain planning degrees because planning is a profession which values varying perspectives and different experiences. We have every expectation, as more minority planners graduate from the programs listed in this GUIDE, that the number of professional planners from disadvantaged and minority backgrounds will substantially increase.

You can lay the groundwork for a successful job search long before you graduate. If you attend local and state or provincial meetings of the American Planning Association (APA) or the Canadian Institute of Planners (CIP) you will meet professional planners involved in a variety of projects—and learn about current and future job openings. It’s a great idea to join APA or CIP as a student because you get all the benefits of membership at a very low student fee. As an APA member you will receive regular correspondence and newsletters from your APA Chapter and Section; newsletters often contain job announcements (so even before you are in the job market you can see the kinds of jobs that do come available, the requirements, and the salary). In addition, APA publishes JobMart which lists job vacancies across the US (and sometimes Canada); APA members can subscribe to JobMart and most Planning Programs have a subscription.
HOW CAN I FIND OUT MORE ABOUT PLANNING?

There are many ways to determine if a career in planning is right for you. If your university sponsors a career day, practicing planners may well attend. Seek them out and ask what they do and what their focus is. Attend a local meeting of the American Planning Association (APA) or Canadian Institute of Planners (CIP). Introduce yourself to some of the planners present and discuss their jobs and responsibilities; question the kind of issues they tackle. Ask if a planning job would allow you to achieve your personal goals.

You can also read about a host of planning issues and how planners are addressing them in Planning, the magazine published by the American Planning Association (APA). Canadian students will find Plan Canada, the magazine published by the Canadian Institute of Planners (CIP), to be equally useful. Both magazines feature the latest developments in planning. Your University or city library may have copies. On their website the APA has a section called Jobs and Careers which describes the profession, discusses the kind of issues planners might address, talks about planning education, and lists scholarships. Visit: www.planning.org

The CIP has a series, Planners at Work, on their website which includes case studies illustrating the value of professional planning in Canadian cities: www.cip-icu.ca/English/home

To more thoroughly research different kinds of planning jobs, and to explore in greater depth a variety of important planning topics, find the latest edition of The Practice of Local Government Planning, published by the International City Management Association (ICMA); many libraries will have a copy. It contains individual chapters by different authors; each explains what a certain type of planner does or explores a major planning issue. There are chapters on land use, environmental, transportation, economic development, and other planning specializations as well as those discussing other important planning concerns.

You may also find it helpful to learn about the careers of a cross-section of practicing planners. In the next few pages you can read about the career paths, background, and education of six professional planners across the United States.

Paul C. Crawford, FAICP

Mr. Crawford received his bachelors degree in Community and Regional Planning from California Polytechnic University, San Luis Obispo. He is currently the president of a private planning firm, Crawford Multari & Clark Associates, which has provided city and regional planning services to more than 100 cities and 18 counties in California. Through his career, Mr. Crawford has served as planning director of the San Luis Obispo County Council of Governments and as an adjunct professor of city and regional planning at Cal Poly, San Luis Obispo. He was elected to the California Planning Roundtable in 1993 and received the 1998 Award for Distinguished Leadership from the California Chapter of the American Planning Association. Mr. Crawford is a nationally recognized expert on zoning and is currently the Co-Chair of the Planners Task Force of the Congress for New Urbanism. He is co-author of Codifying New Urbanism – How to Reform Municipal Land Development Regulations, published by the American Planning Association. Mr. Crawford was inducted as a Fellow of the American Institute of Certified Planners in 2001 in recognition of his many planning contributions.

Malik R. Goodwin

Mr. Goodwin has a BS in Architecture, a Masters in Architecture, and a Masters in Urban Planning, all from the University of Michigan. He is currently a project manager with the Detroit Economic Growth Corporation, a quasi-public agency whose mission is to attract and retain businesses in the City of Detroit. Mr. Goodwin is the general manager for the Lower Woodward Streetscape Improvement Project, a $21 million initiative to improve and enhance three main thoroughfares in the heart of downtown Detroit. He assists the City of Detroit in preparing grant applications and in developing short-term planning strategies for making capital investments in the downtown area. Mr. Goodwin also coordinates capital projects for the City with state and federal agencies. Prior to joining the Economic Growth Corporation, he was an urban designer with a private architectural firm. Mr. Goodwin was drawn to planning because his mother was a city planner. He felt that his interest in helping cities to develop strategies to optimize the use of their resources over time would be enhanced by a planning education. He believes that effective strategists and managers are in high demand among the kind of public agencies which serve as custodians of community resources.
Angela Harper, FAICP

Ms. Harper received her Masters degree in Planning and Urban Design from the University of Virginia after her work for the Nashville/Davidson County Planning Department inspired her to continue her planning education. Since obtaining her degree she has worked with Henrico County, Virginia, in increasingly responsible positions. She has served as director of planning and deputy county manager and has helped the County achieve managed growth and a stable tax base. Ms. Harper was responsible for Henrico County’s first major thoroughfare plan and the County’s strategic plan. She also established the County’s Community Development Block Grant program. She has received awards from the National Association of Counties and the U.S. Department of Transportation for her planning accomplishments. In 1999 Ms. Harper was selected as Local Official of the Year by the National Association of Home Builders. She was inducted as a Fellow of the American Institute of Certified Planners (FAICP) in May of 2001 in recognition of her contribution to planning and the body of her planning accomplishments. She has served on many accreditation site teams, evaluating planning programs for PAB accreditation, and loves being “a cheerleader” for planning.

Emil R. Moncivais, AICP

Mr. Moncivais has a Bachelors degree in Architecture and a Masters of Urban and Regional Planning from Texas A & M University. He is currently the director of planning for the City of San Antonio, Texas; he previously served as the director of planning for the City of Fort Worth. Mr. Moncivias also served as a lieutenant in the U.S. Army and as a professor of urban geography at Texas Wesleyan University in Fort Worth. In his current position Mr. Moncivias directs and oversees the City of San Antonio’s comprehensive planning, neighborhood planning, historic preservation, and GIS (geographic information system) efforts. Under his leadership the City of San Antonio has received nine major awards from the Texas Chapter of the American Planning Association and the International City Management Association. He was drawn to a career in city planning by his experiences with the civil rights movement in the 1960s. He felt that the movement gave him a sense of joy and a vision for the future in which he could make a difference. He saw it was possible to make that goal operational by becoming a planner and helping to develop livable communities, enhance quality of life, and bring cohesiveness to a diversified society.

Tripp Muldrow, AICP

Mr. Muldrow has a BA in English and a Masters in City Planning from Clemson University. He is currently a partner in a private planning firm, Arnett Muldrow & Associates, based in Greenville, South Carolina. The firm helps small towns and cities rebuild their aging downtowns, reinvigorate their historic neighborhoods, and create economic development opportunities while preserving the special characteristics that make each city and town unique. Mr. Muldrow has coordinated commercial corridor business associations, developed and implemented historic preservation policies, and authored downtown development studies, tourism strategies, and economic development master plans. Mr. Muldrow is currently the president of the South Carolina Chapter of the American Planning Association, a board member of Community Builders, a commissioner of the Greenville Housing Authority, and a member of the Board of Regents for Leadership Greenville. Mr. Muldrow was always fascinated by cities, particularly their downtowns, and how they worked. His career path was set once he learned about the breadth and scope of the planning field. He loves his job and finds the opportunities limitless; being a consultant means his work keeps changing which keeps everything exciting.

Terri Y. Montague

Ms. Montague has a Bachelors degree in Economics from the University of Chicago and a Masters Degree in City Planning and Real Estate Development from the Massachusetts Institute of Technology. She is currently the president and chief operating officer of the Enterprise Foundation, which works with local and national partners to develop affordable housing for low income families and provides loans, grants, and technical assistance to nonprofit organizations that are building and revitalizing local neighborhoods. Prior to her job with Enterprise, Ms. Montague managed a strategic investment initiative in housing and community investment for Lend Lease Real Estate Investments. In her current position, she is responsible for the day-to-day operations of the community development nonprofit corporation with an annual budget of $50 million and 235 employees nationwide. She began
her community development career as a Geno Baroni Fellow at the Community Information Exchange in Washington, DC.

Ms. Montague initially found planning so appealing because of its interdisciplinary nature and the promise it holds for creating effective public/private partnerships. She feels that planning offers the potential to understand and shape the vital and varied institutions that transform the nature of opportunity in our cities–especially for low income people and places.

A PLANNER’S EDUCATION

What kind of an education should a planner have? Today most people need a professional Masters Degree in Planning to get the best planning jobs, although a Bachelors degree (BA or BS) can provide an entry into the profession. Universities offering both Bachelors and Graduate degrees are profiled in this GUIDE. People can enter Masters programs in planning with many different kinds of Bachelors degrees; it is not necessary to have a BA/BS in Planning to do graduate work in planning. Some planners are educated first in the social sciences like public administration, sociology, economics, geography, or government; others are trained first in the design professions like architecture, urban design, and landscape architecture. Still others have their undergraduate degree in professions such as public health, social work, nursing, or engineering. Many people with undergraduate degrees in the Arts or Humanities (English, Art, History) also choose to pursue a graduate planning degree.

Some people use the new skills they acquire in graduate school to expand the emphasis of their undergraduate degree while others develop new approaches. For example, those with economics training may become economic development planners while those with degrees in biology or chemistry may choose to become environmental planners. But it is not unusual for someone trained at the undergraduate level as an architect to become a social policy planner or for someone with a BS in Nursing to become a housing planner!

There are many universities where you can gain the education and training you need to become a planner. Today there are more than 120 planning programs or planning departments which are members of the Association of Collegiate Schools of Planning (ACSP) or of the Association of Canadian University Planning Programs (ACUPP). Seventy-one U.S. programs and nine Canadian programs give accredited degrees; a few Canadian schools are accredited by both organizations. Most of these programs are described in detail in the body of this GUIDE.

You should try to attend a planning program accredited by either the Planning Accreditation Board (PAB) in the U.S. or the Canadian Institute of Planners (CIP) in Canada, because it can make a difference in your career. These organizations review Masters or Bachelors Planning programs to assure prospective students, employers, and the public that the education and training they provide measure up to the profession’s standards—and that they are therefore qualified to train future planners. The PAB does not evaluate PhD programs for accreditation because the primary focus of the doctoral degree is usually not professional practice. However, the CIP does evaluate Canadian PhD programs for accreditation.

The PAB is jointly sponsored by ACSP, the organization of planning professors (and the authors of this GUIDE), and by an organization of professional planners, the American Institute of Certified Planners (AICP). The CIP is the Canadian organization of professional planners. The PAB strives to foster high standards for professional education in planning; accredited programs must meet strict standards developed cooperatively by both practicing planners and planning academicians. The same is true of the Canadian schools accredited by the Canadian Institute of Planners.

Not all accredited schools teach the same courses or emphasize the same subjects—in fact, the differences between the schools appeal to different student interests. But the curriculum at all accredited schools will provide you with a core set of theories, methods, and techniques which properly prepare you for a career as a practicing planner. Graduating from an accredited program will make you more attractive to most agencies or firms hiring planners. In addition, you will be able to join the American Institute of Certified Planners (AICP) sooner after leaving school if you attend an accredited school. Being a certified planner can advance your professional career.

This GUIDE also contains several universities outside North America; these programs may be very interesting to you. Remember however, no program outside of North America is eligible for either PAB or CIP accreditation.
HOW TO CHOOSE THE BEST PLANNING PROGRAM

While all accredited planning programs cover the same set of core materials and techniques, they do so in different ways. Planning programs vary greatly in the issues they emphasize, the research they foster, and the professional projects in which they engage. As a result, programs may differ markedly in the kinds of topics to which you will be exposed, the other students with whom you attend class, and the kind of educational experience you will have.

For example, planning programs located near the ocean may offer a concentration in coastal resource planning; programs located in farm states may focus on rural and small urban planning issues; those along the Mexican or Canadian border may stress comparative planning. Of course, other planning programs may offer these same concentrations in response to the backgrounds and research interests of their faculty. Individual programs also vary in the extent to which they emphasize practice in studios and workshops or in the degree to which they expose students to research and policy analysis. Some programs have established international ties; others have long worked with local communities to provide students with practical experience.

To determine the planning program which will best provide you with the education and training you want, decide which issues you would like to highlight in your educational program and the professional specialization you think you might want to follow. Then look at the programs listed in this GUIDE to see which stress the topics you want to cover, which provide the courses you would like to take, which offer the experiences you seek.

You may be interested in the background of the other students in the program; for example, if you would like to work or study for awhile in another country you might be interested in a school that has a fair number of international students or faculty with comparative research interests. If you would like to be part of a small, intimate program think about applying to schools with a relatively small number of students. If you are interested in research or think that you might want to go on for a PhD in Planning (which would allow you to teach at a university) you might want to consider those programs that offer both Masters and Doctoral degrees.

If you are interested in learning through hands-on experiences, try to identify those programs offering a large number of project courses or requiring a professional project (or “capstone”) report instead of a thesis to graduate. If you want to spend some time working internationally, you could select a university that has exchange programs in other countries. Perhaps you have an interest in another subject related to planning, like public health or law: look for programs with dual degrees in planning and these other fields. And of course, you have to consider financial and other practical details—scholarships and grants, the possibility of getting a job or loans, the total cost of education, etc.

This GUIDE is set up to help you quickly evaluate a large number of planning programs by comparing the major factors likely to be of most interest to students: the course offerings and requirements, the type of students in the program, the background and experiences of the faculty, the costs of attending, and the possibility of financial assistance. But the brief entries in this GUIDE can only help you narrow down your choices—there simply isn’t enough space to tell you all you want, or need to know about a prospective program.

Once you have identified a number of programs that might meet your needs, contact them directly! Start by visiting their websites; then contact the chair of the program or individual faculty who work in the areas in which you have an interest. Most programs have a wealth of promotional material they will be happy to send you.

Students often ask: “What’s the best school for...” this or that specialization. There is no one answer. The Association of Collegiate Schools of Planning has refused to rank schools because every planning program in the GUIDE has its own strengths and resources. There is simply no effective way to say that one school offers a better degree than another. Planning students bring their own goals, background, and experiences to their educational career—so different individuals will get very different things from any individual planning program. Only you can decide the best school for your needs, interests, and resources.
HOW TO USE THIS GUIDE

In this section, we’ll try to explain how to read each entry in the GUIDE. In order to provide you with a large amount of information in very little space, the entries in this GUIDE contain many abbreviations. In addition, you may not be familiar with some of the terminology. So we’ll show you how to “de-code” the entries and use the data to compare and contrast some of the schools which have sparked your interest.

The first line of each entry lists the name of the university. If this university were called America State University it would be one of the first entries in the GUIDE. However, if the official name is the University of America it will be near the back, with all the listings beginning with “University of...” This is the way in which most major student guides organize schools. It may be confusing initially but once you remember, it will be easy to find the school you want. Remember there may be two different schools, America State University and the University of America.

The first line also tells you what planning degrees each university gives; the icon BA means that the university gives at least one undergraduate planning degree (which may be either a BA or a BS). The icon MA means that the university gives one masters degree in planning (which may be an MA or MS or other masters designation). The icon PhD means that the university gives at least one doctoral degree in planning. If the first line does not display a specific icon (BA, MA, or PhD) it means that the university does not give a planning degree at that level.

The first line also shows you whether the undergraduate or Masters programs the university gives are accredited by either the Planning Accreditation Board (PAB) or the Canadian Institute of Planners (CIP). If the icon PAB or CIP is shown under the degree listed, at least one of the degrees given at that level at that university is accredited. Note that a school with multiple Masters degrees may have some that are, and some that are not accredited—for example their Masters degree in Urban Planning may be accredited but not their Masters degree in Historic Preservation and Design. To save space on the first line, you will see the PAB or CIP icon if any of the Masters or undergraduate degrees given by this university are accredited. Be sure to check the text below to get complete information for the specific program or degree in which you have an interest.

Remember that doctoral programs are never accredited by the PAB because such programs don’t generally focus on professional practice—so none of the U.S. schools offering a doctorate will show an accreditation status. This is not a deficiency! However the CIP does accredit PhD programs in Canada. Neither organization accredits international universities.

Finally the first line of each school’s entry tells you its membership status in the Association of Collegiate Schools of Planning, the sponsor of this GUIDE. FULL members are those giving planning degrees in the US. AFFILIATE members are generally those schools in the U.S. that give degrees related to planning but not planning degrees (urban studies or urban geography). Schools outside the U.S. are eligible for CORRESPONDING membership if they give planning or related degrees.

The top of the left column of each entry generally gives you the name of the chair of the entire department and the departmental mailing address; it usually provides the department phone, fax, e-mail and website address as well. Note that the chair may not be the contact person for any or all of the planning degree programs offered; an individual entry may list a different contact person for each program. Remember phone numbers and addresses change; if you have trouble, seek out new numbers through telephone information or by visiting the university website which should be easily found by any net browser.

PROGRAM INFORMATION

This section in the left-hand column summarizes the most important details you might want to know about each of the planning degrees which the university offers. It shows the deadlines for application and for requesting financial assistance as well as what the application fee will be. The text may also indicate what tuition costs will be if you are a resident of the state or if you are from out-of-state (this distinction usually only applies at public universities).

This section gives you an idea of the availability of financial assistance by listing scholarships, research and teaching assistantships, and other job opportunities. In general, the more awards and assistantships the better—but you will have to talk to each school to learn how likely it is that you will be able to get financial assistance of some kind.

You should question the conditions of any
scholarship or grant--will you receive it as long as you are in school or only for your first year? If a school has only a small amount of scholarship money it may choose to give it all to entering students, as a recruitment incentive. That means that second year students may be left without any aid. If the university offers research assistantships or other kind of paid work, find out how much work you will really have to do and how likely it is that you will be able to hold the job or assistantships for your entire education.

This section also contains a small chart with some details about student enrollment. It should also give you an idea of how easy or difficult is to be accepted as a student. The chart shows the figures of students who applied for admission to the program, the number who were accepted by the program, and finally the number who actually enrolled. These numbers should give you an idea of the number of students in the program that interests you. Generally the number of students accepted is less than the number who applied; the number who are enrolled is usually less than the number accepted. Most universities turn down some students who apply; some students who apply and are accepted decide not to come. If there is a big gap between the number who applied and the number of students accepted, it generally signals that this is a very popular program and hard to get into. It is less clear why there may be a gap between the number accepted and the number who end up enrolling. Sometimes this means that acceptance decisions are made independent of financial aid decisions and that some students who were accepted were unable to find scholarship or other kinds of financial assistance.

DEGREE DESCRIPTIONS

The GUIDE next describes each of the degrees offered by the university, starting with any undergraduate degrees. Not every university has provided exactly the same information so not all entries are identical. However, in general, the text tells if the program or degree is accredited, how old it is, and the total number of degrees granted over the last few years. If a university has more than one undergraduate or graduate degree, the text will indicate which, if any, of those programs have received PAB or CIP accreditation. Remember that the top line of each school’s entry only indicates if at least one of the degree programs is accredited; if they give more than one degree the specific degree which interests you may or may not be accredited.

The GUIDE next identifies the substantive specializations available for each degree. This can give an idea of the range of areas where you can concentrate your efforts; these specializations generally reflect the skills and interests of the faculty. Compare the size of the faculty (listed later in each school’s entry) to the number of specializations offered; if a school claims many specializations but has a small faculty it may lack the resources to allow you to fully develop your skills in any given area.

Also check the specializations offered against the background of individual faculty; if you are interested, for example, in the school’s environmental planning or urban design specialization, make sure that some of the faculty actually have expertise in these areas. In addition, when you begin to contact schools of interest, ask about the actual number of classes the program gives in each specialization and when they are offered. Sometimes even large programs have only a few courses in certain specializations and those are given infrequently--if so, you might actually have to stay in school longer just to be able to take the required courses!

Pay special attention to whether the classes offered in your specialization of interest are planning courses or if they are actually taught by faculty in other departments. It is important to be able to take courses in other departments across campus--but make sure at least some of the courses in your specialization are actually taught by planners, with the professional focus of someone who is a planner. The text next indicates the prerequisites and other requirements needed to get into the program. Most programs describe any exams you must take (like the ACT or SAT for undergraduates and the GRE for graduates) and the minimum score you must achieve. Note that not all programs require such exams.

The text will also indicate any other prerequisites needed to apply such as a minimum grade point average. You should ask the programs in which you have an interest for a list of prerequisite courses or skill levels and an idea of what you will have to do if you are missing some prerequisites. If you are required to make up missing prerequisites you will need more hours/credits than indicated to graduate. Planning programs often list this information on their websites; if not, they will be happy to send printed materials to answer most of your questions.

Next, each university usually explains how many units or hours needed to obtain the degree in
question, breaking those totals down into required courses, restricted and unrestricted electives, and the final product required—such as a thesis or professional report or capstone project. Most Masters programs require between 36 - 60 hours/credits to graduate. However, if you are missing some prerequisites, for example economics or statistics, you might have to make them up either before you are allowed to officially enter the program or while enrolled in the program.

Most programs require all students to take the same, core, courses, which cover material central to the educational experience offered in that degree program. In addition, students with different specializations are often required to take specific elective courses; for example, someone majoring in land use planning might well have to take different classes than someone majoring in housing. Most programs allow students to take some “free” or unrestricted electives.

Compare the hours of core courses and the restricted versus unrestricted electives to get a general idea of the degree of flexibility you will have in the program. In general, the more hours in the core the fewer electives you can take; the more restricted the remaining the electives, the less freedom you may have in pursuing courses outside the planning department. Some students like to have many electives, preferably unrestricted, because they can customize their degrees to match their interests. Other students prefer a more structured curriculum because they want to be sure that they are developing the range of specific skills needed by planners.

The text also indicates what kind of final product you will have to produce to get the degree; for example whether you must take an exam, write a thesis or dissertation, prepare a professional report, or take part in a “capstone” or joint professional project of some kind. Some schools allow you to choose among several options while others require the same final product from all students. Programs also vary in the extent to which they give class credit for preparing the final product; some programs indicate the number of hours/credits, if any, you are allowed to take to finish your thesis, etc.

**STUDENT COMPOSITION**

These charts give you an idea of the number and diversity of the students in each planning degree program the university offers. These student statistics are also useful in determining if you will be taking courses with international students and if you will be working with students from various ethnic and racial backgrounds.

**FACULTY DESCRIPTIONS**

The GUIDE contains two separate entries for faculty. The text describing PLANNING FACULTY includes those people who spend at least half their time teaching in one or more of the listed planning programs. The second set of faculty descriptions, OTHER AFFILIATED FACULTY includes those people who teach in other university programs—like engineering, geography, or social work—for the majority of their time or those who are practicing professionals who teach occasionally or part-time in the university’s planning program. Sometimes this category includes retired professors or university administrators who teach planning courses occasionally.

You will get the best educational experience from schools which effectively mix these faculty components. It is important to have courses with faculty who are active in professional practice and it is useful to take classes with those from other disciplines. However, be sure the university has a minimum number of faculty who are dedicated to the planning program for most of their time—or you could find it hard to get the courses you need or even to interact in any meaningful way with your professors. Also be sure there are enough faculty to cover the core curriculum from a planner’s perspective.

The faculty entries give you a very brief idea of the background, skills, interests, and experiences of the faculty with whom you might be studying. If the faculty member has taken a professional certification exam through the American Institute of Certified Planners, the icon AICP will appear opposite his/her name. This generally indicates that the faculty member is very interested in professional planning practice. The icon FAICP means the faculty member has been named a Fellow of the AICP, a very prestigious honor for a professional planner.

The first line of text below a faculty member’s name indicates his/her rank and seniority—the most senior (in U.S. schools) are Professors followed by Associate and then Assistant Professors. If someone is listed as visiting or adjunct it generally means that s/he is not a permanent member of the faculty—and may be gone before you arrive. If someone is listed as emeritus it means that s/he has retired--retired
professors vary greatly in the number of courses they teach.

The text next indicates the degrees which the faculty member has and the university where they obtained those degrees; some, but not all, entries indicate the year(s) in which their various degrees were granted. While most planning professors have a PhD, not all do, particularly if they are or have been active practitioners.

The next line indicates the specializations or expertise of each faculty member. If you have an interest in a certain specialization you may want to see how many of the program’s faculty actually claim expertise in that area. You will also want to know who will actually be teaching core or elective courses in that specialization; to do so, get a copy of the course offerings directly from the school by visiting the website and/or contacting the program directly. Once you have seen the number and kind of courses taught in the concentrations in which you have an interest, you can directly question individual faculty about the program, the courses they teach, and the requirements of the specialization.

FYI

Alabama A&M University is one of two Universities in the State of Alabama offering an accredited degree in urban and regional planning and one of the twelve universities in the nation with accredited urban planning degrees at both undergraduate and graduate level. Alabama A&M University offers scholarships and assistantships to eligible students. Academically qualified white residents of Alabama may apply for the Diversity Scholarship for the Undergraduate program.

The Department of Community Planning & Urban Studies was established in 1970 as the Department of Urban Studies offering only the MS in Urban Studies. Following this was the undergraduate degree program in Urban Studies, which was later replaced by the BS degree program in Urban Planning.

The Master of Urban & Regional Planning program evolved in 1982 from the Master of Community Planning program, which was established in 1975. It attained initial recognition in 1976.

PLANNING FACULTY

Michael Clay
Assistant Professor: BS, Brigham Young 1999; MCRP, Iowa State 2001; Ph.D, University of California, Davis, 2005. Specializations: Transportation Planning, Transit, Land Use, Quantitative Methods.
(334) 844-8412 claymic@auburn.edu
Our program is devised to prepare students with diverse backgrounds for professional planning careers in both the public and private sectors. Graduates are skilled at describing and analyzing urban processes and conditions; at creating and evaluating alternative measures to shape future growth and development; and at devising and recommending appropriate mechanisms for the implementation of their proposals.

One-fourth of our students hold graduate assistantships, which provide a monthly stipend and full tuition waiver. We offer joint degree options with the Architecture, Landscape Architecture, and Public Administration programs; and study opportunities with the Center for Architecture and Urban Studies in Birmingham and the Auburn Abroad program in Rome.

**Daniel Bennett**
Professor: B Arch., Auburn University 1968; M.Arch, Rice University 1974. **Specializations:** Urban Design, Site Design, Urban Form.

(334) 844-4285 bennedd@auburn.edu

**Sharon Gaber**
Professor: AB, Occidental College 1985; MPL, University of Southern California 1987; Ph.D. Cornell University 1993. **Specializations:** Housing, Community Development, Research Methods, Social Planning.

(334) 844-5771 gabersl@auburn.edu

**Charlene LeBleu**
Assistant Professor: BS, University of Florida; MCP & MLA, Auburn 2003. **Specializations:** Site Design, GIS, Ecological Planning.

(334) 844-0192 leblecm@auburn.edu

**Cheryl Morgan**
Professor: BA & B. Arch, Auburn 1974; M. Arch, University of Illinois 1976. **Specializations:** Urban Design, Small Town Planning, Community Participation.

**TRANSPORTATION PLANNING**

Transportation planners help develop programs to meet the current transportation needs of families and businesses, locally and across a region; they also attempt to predict future travel patterns in order to identify the need for additional transportation services and facilities. Some transportation planners are very technically oriented and work with advanced computer technology; others deal with the social and economic aspects of travel. Some focus on one mode such as cycling or public transit while others attempt to plan for multiple modes. Transportation planners working for local governments often respond to traffic congestion; others develop ways to finance new facilities. Some transportation planners help develop programs which are designed to encourage people to drive less, or which provide home-to-work options for welfare recipients trying to find jobs, or which organize special transportation services for the elderly. Many transportation planners coordinate their activities with environmental, land use, and economic development planners.

The Ball State Bachelor of Urban Planning and Development is among only 15 accredited undergraduate programs in North America, and its graduate program is the only such program in Indiana. Our undergraduate program and the core of our traditional masters program are offered in Muncie.

We are part of the nationally recognized College of Architecture & Planning, and housed within a state-of-the-art building amidst a bucolic, 750-acre main campus in Muncie, and a satellite campus in the heart of Indianapolis. Muncie is a city of 65,000 with a low cost of living and an easy lifestyle, enriched by a growing creative class and a large number of arts programs both at the university and in the community. Some courses in the accelerated track graduate program are offered in the Ball State Indianapolis facility, located just south of Monument Circle in the heart of the city.

**THESE VALUES CONSTITUTE OUR PROGRAM ORIENTATION**

**Immersive Learning** - Our program has an established tradition of a hands-on approach to professional education, a tradition that has become a model for Ball State’s comprehensive commitment to immersive learning. In our studio classes, students apply their classroom learning to real-world problems, working in teams with real-world stakeholders.

**Experiential Learning** – In addition to the immersive experiences offered in many studios, students apply their learning to real issues, using real sites and real data, in other selected classes, in co-curricular community charrettes, and, at the student’s option, in many of the capstone student projects.

**Physical Context** – Every student will learn to analyze and understand the physical context in which planning takes place and to participate in the making of physical plans. Courses dealing with community development, economic development and social issues all acknowledge the physical world in which those planning issues are addressed.

**Sustainability** – Our curriculum and our courses recognize that healthy communities are socially, economically and ecologically sustainable ones.

**Plan Implementation** - Simply, plans in the public interest are made useful if they are implemented. Students learn about the political, practical, legal and economic aspects of plan implementation, working with full-time and adjunct faculty members who have direct experience in that field.

**Learning Community** - We are a faculty of teachers first. Our missions in research and service to our external constituencies of profession and the general community are not neglected, but those are subordinate to the obligations we have to our students. This collegiality and attention is nurtured and maintained as our hallmark.

**FYI**

Boston University's Masters degree program in urban affairs (MUA) and city planning (MCP) offer a breadth of courses that individually and collectively challenge students to see not only cities, but also their own role as planners, policy makers and social advocates (current or future) in a critical and thoughtful light. Students are asked to consider the political, social and technical implications of each facet of planning and policy making, and to thus grapple with the fact that there are few, if any, simple solutions or approaches to urban issues.

We match the breadth and substance of our courses with a program that is unparalleled in its flexibility for prospective students. BU students can pursue their MCP or MUA studies in a full-time or part-time basis depending on his or her own schedule, as well as professional and personal commitments. Without jeopardizing grades, academic standing or other commitments, BU students can start their MCP or MUA by taking anywhere from one to five courses per semester depending on his or her schedule and personalized study programs.

Through its course schedule and degree requirements, financial arrangements and responsive staff, BU's MCP and MUA programs manage to remove many barriers to graduate education that would otherwise keep many people from considering much less completing a solid recognized graduate education in planning and urban affairs. This commitment to accessibility results in a student body that is truly diverse and it is this diversity that makes teaching and learning at BU so exciting. From a faculty's perspective, the diversity challenges each professor to prepare a course materials that engages a broad spectrum of interests and backgrounds, which, in turn, makes it way back to his or own thinking about the fields, city planning and ideas for future research and courses.

FYI

The City and Regional Planning Program at Cal Poly-San Luis Obispo is part of the nationally recognized College of Architecture and Environmental Design, which is the largest college of its kind in California. We have awarded over 1,000 degrees (Bachelors and Masters level) since the program began in 1968. Students often use the phrase "get an education, get a job, make a difference" when talking about their experience at Cal Poly. We are proud of the program's strengths in land use planning, environmental planning, urban design and community sustainability. We utilize the "learn by doing model" where the student acquires a strong professional skill set as well as an understanding of the planning process. Students learn how to develop and implement community plans.

Students complete at least one internship in an actual planning agency, private firm or non-profit organization. This gives each student real-world experience and, many times, a head start on finding a job after graduation. Both public and private employers seek to hire our program's graduates, as we have a well-earned reputation for providing students an excellent professional education. CRP graduates have become planning directors of major US cities and principals in highly acclaimed private firms.

Students work with a faculty that has an excellent balance of professional experience and academic preparation and, more importantly, who are exceptional instructors. Our faculty (full-time and part-time) are involved in environmental planning, sustainability, urban design, plan implementation, international planning, geographic information systems, community development, climate change, disaster mitigation planning, form based codes, transportation and the land use development process.

The award-winning and nationally ranked City and Regional Planning

Department is recognized for its educational excellence and student achievement including the American Institute for Certified Planners (AICP) student project award for best applying the planning process, the American Planning Association (APA) awards for best paper in transportation planning, APA award for outstanding leadership by a student planner, and many California state awards for community plans and low-cost housing projects proposals. The masters program ranks #1 nationally for programs without a Ph.D. program in the 2009 Planetizen Guide to Graduate Planning Education.

CRP students have the advantage of being able to to take courses in the College of Architecture and Environmental Design's other disciplines that include Architecture, Landscape Architecture, and research units of the college such as the Collaborative Agent Design Research Center (CADRC) and the Community Safety and Sustainability Group (CSSG). Students have the opportunity to complete minors in the following areas: Real property development, sustainable environments, and construction management.

Access to these departments provides an exciting opportunity to work in various areas of environmental design practice. To understand our ever-globalizing world, CRP offers its students opportunities to study abroad in partner universities in Brazil, Switzerland, Mexico, Portugal and Honduras.

The city of San Luis Obispo (about 44,000 people) is located on California's scenic Central Coast, about halfway between San Francisco and Los Angeles. There is a small town feel to the community that enjoys many arts and music festivals, a wonderful year-round temperate climate, close proximity to the beautiful Pacific Ocean, and excellent outdoor recreation activities in the nearby hills and beaches. It is a wonderful place for learning and enjoying the exceptional natural environment offered by the Central Coast.

GRADUATE CERTIFICATE IN URBAN PLANNING

The department has been authorized to offer a 15 credit graduate certificate in urban planning. The certificate program is designed primarily to serve working professionals. It seeks to assist those already working in the field of planning who seek educational opportunities beyond the bachelor’s degree and also professionals working in closely related areas who wish more exposure and knowledge of planning practice. The program is designed to be completed in one year. This entails two semesters of class work (6 credits per semester) and a capstone fieldwork project (3 credits) completed during the summer.

Interested applicants should contact the department for further information on this program.

Building on the strong tradition of CUA’s architecture programs, the Master of City and Regional Planning (M.C.R.P.) links design with policy to assist planners in the stewardship of the built, natural, and cultural environments. The curriculum prepares students with the foundation to become generalist planners and steward planners according to the CUArch mission.

In today’s climate, planning and design interventions should consider the impact on the environment. At CUArch students will learn about creating better environments from the perspective of sustainable design and planning principles. The Washington, D.C., metropolitan area provides an excellent laboratory to explore planning issues, in urban, suburban, and exurban locations.

The planning curriculum integrates planning history, theory, practice, zoning and legal aspects, land use, transportation, and analytical methods, all of which form the foundation of the generalist planner’s perspective. Coupled with a design orientation, these policy-related subjects will be framed within sustainable design and planning principles as well as the context of regionalism. The program is also aligned closely with the Master of Science in Sustainable Design program.

The M.C.R.P. is a minimum two-year, 48-credit hour program with an optional design focus that increases the program to 60-credit hours. This added coursework will strengthen the physical design skills for those who do not have an architectural background or who want to extend their training in the context of physical planning.

FYI

The School of Urban and Regional Planing is a locus of scholars, teachers, practitioners, agents and students committed to the continuous improvement of urban regions and the planning enterprise through research, teaching and service.

The School provides an environment to discuss, develop and disseminate new ideas and concepts, and contribute to the practice of planning directed towards a future that is environmentally, economically and humanly beneficial. The focus of our work relies on the recognition and use of multi-scalar connections and interactions of systems and planning activities including policy framework development, participatory decision-making and community stewardship. The School seeks to exploit the potential of emerging technologies and collaborative engagement in creative and innovative ways.

Current initiatives include global urban network’s climate change, metropolitan form, disaster management, place making, healthy cities and housing market issues.

Randy Schulze  

FSU DURP is the oldest accredited planning program in the State of Florida and since 1965 has graduated over 1,200 students with Masters and Ph.D.'s in urban and regional planning.  As such, FSU DURP is one of the largest producers of planners in the nation.  FSU DURP's faculty are dedicated to preparing their Master’s and Ph.D. students for careers as leaders in planning practice and university teaching and research.

The program has also added three certificate programs that reflect interest from students for training in specific areas in demand by employers. Master’s and PhD students can earn certificates in Conflict Resolution, Real Estate, and Urban Design. These certificates build upon DURP’s connections to other campus units, including the Florida Conflict Resolution Consortium and the College of Business.

90-100 percent of FSU DURP's master's students obtain planning positions within a few months of graduation and recent Ph.D. graduates have obtained planning school teaching positions at the University of Iowa, Oklahoma University, Texas A and M University, University of Minnesota, Izmir Institute of Technology, University of Toledo, and Queensland University of Technology. Graduates of both programs are now employed in 49 states and over 38 foreign nations as professional staff in private consulting firms, development companies, law firms, universities, research organizations, and in local, state, regional, and national offices.

FSU DURP endeavors to attract a large and diverse set of students to urban planning. In recent years, approximately half of the incoming graduate students have received financial aid generated by the Department. Much of this aid comes from sources external to Florida State such as grants, contracts, and gifts.

FYI

Frostburg State University offers the only undergraduate major in urban and regional planning in Maryland.

The major in urban and regional planning, begun in 2002, replaces the concentration in urban planning that was completed by more than 200 graduates since it began in 1970.

The Environmental Analysis and Planning major began as a program to train specialists in coal mine reclamation, and was revised in 1990 to have a broader focus on environmental planning.

Internships for 9 or 15 credits are offered each semester and summer. Students must apply and meet academic progress requirements to earn internship credit.

Planning programs are coordinated within the Department of Geography which has labs for environmental science, field equipment, and four computer laboratories for GIS, mapping science and environmental design.

Students in both planning programs must complete a capstone project, but the experience is built into required courses. Also, several major courses meet general education requirements of the university (17 hours in urban and regional planning, and 18 hours in environmental analysis and planning) allowing students to complete minors or second majors in other fields.

**FYI**

We believe the integration of our educational mission and institutional setting with the extensive professional opportunities available to students within the City and Regional Planning Program; we position our graduates to be among the most competitive in the globally expanding field of planning.

Our mission is to be a global leader in the creation of sustainable cities and regions. We incorporate this mission into our teaching and research through a strong commitment to the interdisciplinary nature of planning. With this goal in mind, we offer our students six dual degree programs as well as seven areas of specialization that may be combined through our curriculum to develop integrated programs of study. Our nationally recognized faculty advances this mission both in the classroom and through a wide range of research and professional activities, including the editorship of the Journal of the American Planning Association (JAPA).

Our institutional setting within the College of Architecture and one of the nation’s premiere technology institutes enables students to acquire expertise in every area of the urban development process, including planning, design, construction/engineering, and management. The City and Regional Planning Program is home to two major research centers, the Georgia Center for Quality Growth and Regional Development and the Center for Geographic Information Systems; which provide research opportunities and financial support to many of our students and establish critical linkages between the Program and the larger regional community. Through these linkages we have created a highly successful co-op program with regional employers.

Our regional location in one of the largest, most diverse, and rapidly growing metropolitan areas of the United States which affords our students direct access to a vibrant laboratory for urban planning. Due to its unique combination of urban amenities, temperate climate, and employment opportunities, Atlanta attracts more young professionals annually than any other U.S. city. We take advantage of our dynamic metropolitan setting through the development of three to four applied studio courses per year, which involves numerous regional planning practitioners as adjunct professors. Our access to a wide range of federal, state, local, and private sector planning organizations affords us the opportunity to employ a large percentage of our graduates.

**FINANCIAL AID INFORMATION**

Approximately 2/3 of the MCP class receives some form of tuition assistance. Of these, roughly half receive full-tuition awards for one or two years, some with additional RA stipends; others are typically offered half-tuition grants. Students admitted without aid are also eligible to apply for funding in the second year of the program. All students can apply for departmentally funded jobs and off-campus internships (~$2,500/semester). Aid is based on need and merit. We encourage all applicants to apply for aid regardless of nationality or race.

FYI

CAN YOU MAKE A DIFFERENCE IN THE WORLD?  
Can you design better cities?  
Can you help places grow sustainably?  
Can you help communities thrive?  
Can you help advance equitable world development?

MIT IS MAKING A DIFFERENCE AND YOU CAN TOO  
At the MIT Department of Urban Studies and Planning (DUSP), we are committed to positive social change. Our moral vision is translated into professional education in distinct ways:

We believe in the abilities of urban and regional institutions to steadily improve the quality of life of citizens.

We emphasize democratic decision-making involving both public and private actors, and acknowledge the necessity of government leadership to ensure greater social and economic equality.

We foster a positive approach to technological innovation as a major force of social change.

We trust that the built environment can meet the needs of diverse populations and serve as a source of meaning in their daily lives.

Montreal is a cosmopolitan city with roots in both French and English culture. It has four universities and many colleges, a downtown that is active 24/7, attractive and safe neighborhoods, and plenty of recreational opportunities. It is an exceptional laboratory for urban studies and planning, and the School is well-integrated in the local planning world. Students, who have varied disciplinary and ethnic/cultural backgrounds participate in local planning through studio courses and individual initiatives. The School is also very active in international research and has extensive experience in China, India, Pakistan, Southern Africa, Nicaragua, Honduras, Costa Rica, Barbados, Belize, Trinidad and Tobago.

F Y I

The MSU Planning Program, founded in 1946, has the oldest urban planning undergraduate degree program in the nation. Graduates of the Bachelor’s and Master’s degree programs are scattered throughout the U.S., offering a large network of alumni and potential job contacts. Through Urban Planning Partnerships, which is the outreach unit located within the Program, students carry out real-world planning research for a range of small towns and cities. These cities include Detroit, Lansing, Flint, Grand Rapids, and Pontiac, Michigan. Good ties with area state government and local planning agencies lead to a number of excellent internship placements for students.

FYI

The program is the oldest planning program at a Historically Black College/University (HBCU). It is the first HBCU program accredited by the Planning Accreditation Board. The program teaches practical professional applications using Baltimore region as a model. The program is offered in the evening to meet the need of working students. Work experience, motivation, interest, and maturity are also considered for the selection of non-degree students (i.e. those candidates who may not meet the criteria for conditional or unconditional admission). Applicants admitted as non-degree students may enroll in maximum of eight credits a semester for a maximum of five years and must maintain a cumulative GPA of 3.0. Non-degree students may apply for a degree program upon the completion of minimum 12 graduate credits with a cumulative GPA of 3.0.

Northern Arizona University is located in Flagstaff, Arizona, a city of approximately 60,000. At an Elevation of 7,000 feet, Flagstaff sits at the 12,000 foot San Francisco Peaks and is surrounded by the largest Ponderosa pine forest in the world. This four-season city is focal point for a region offering a wide range of recreational and cultural opportunities, all of which department classes and program take advantage of.

A little over an hour’s drive will take you to one of the greatest wonders of the world-the Grand Canyon. Winter skiing and the red rock country of Sedona are a short drive from the city. The surrounding area is rich in Navajo, Hopi and other American Indian cultures. The Coconino National Forest surrounds Flagstaff and offers recreational activities from hiking and mountain biking to fishing and boating.

FYI

Master's Degree in Urban Planning and Real Estate Development
The mission of the program in Urban Planning and Real Estate Development is to provide a center for education, community dialogue and research to support urban growth, and revitalization in the St. Louis region and globally.

Why Include Real Estate?
Land and land transactions are fundamental aspects of development and revitalization. Whether you are working on neighborhood, infill-housing, or attracting a major industry to increase employment, land transactions are a critical aspect of "making the deal." A basic understanding of financial concepts, land use laws, and the language of real estate transactions are important to both public sector and private sector professionals.

UPRED works with and on issues that run the gamut of human settlement and sustainable development. The St. Louis region is our primary focus, but our search for ideas and solutions is national and global.

The problems of urban decline and disinvestment are not unique to St. Louis. Similarly, problems caused by population growth on the urban fringe and changing employment locations are not just symptomatic of life in urban areas of the United States. The skills and competencies gained in the program are designed to develop local, regional, and global perspectives.

Program Design
UPRED is a 45-credit hour program.

Key elements are the studio/workshop courses, internship, and concentration. The workshop/studio courses are intended to develop your technological, teamwork, and leadership capacity in handling active planning problems. Building on the previous semester, each workshop/studio introduces a new problem to be resolved and new skills to be commanded.

Building Specialization: The program offers each student the opportunity to enhance his or her interests by specializing in one of three areas of concentration. The concentrations are:
- Real Estate Development
- Economic Development
- Community Development

HOUSING, SOCIAL, AND COMMUNITY DEVELOPMENT PLANNING

Many planners practice in these overlapping areas. Housing planners help develop strategies to increase the supply of affordable housing and expand home ownership among low income or disadvantaged groups. These planners often try to create incentives and remove constraints on private home builders or work with public or non-profit organizations to build housing units for low income families or senior citizens. Many housing planners try to encourage mixed use developments which offer services and jobs close to where people live; others promote projects which provide housing opportunities for people from a mixture of income levels. Planners concerned with the social aspects of a community often combine their interest in housing with efforts to increase the overall quality of life in poor or minority neighborhoods. Many social and community planners work to improve multiple aspects of a targeted neighborhood, combining many substantive planning skills from economic development to urban design. For example, community and social planners may work to improve transit service in disadvantaged communities or develop job training programs for unemployed residents or provide better public health facilities in low income neighborhoods. These planners often work with land use and transportation planners.

San José State University’s Department of Urban and Regional Planning is uniquely poised to educate future and current planning professionals and to generate innovative research to further the discipline. The university is located in downtown San José, the largest city in Northern California and the capital of Silicon Valley, one of the most rapidly changing and socially complex metropolitan areas of the nation.

The department offers graduate study leading to the degree of Master of Urban Planning. The program trains skilled professionals who graduate with a strong education in general planning practice and theory, as well as specialized training in planning sub-fields.

Graduates also become familiar with cutting-edge planning concepts and applications that are evolving locally in the Silicon Valley and larger Bay Area. The department takes advantage of its urban location by collaborating with local planning agencies and through hands-on work with community-based organizations. Faculty and students engage in public service projects designed to assist local communities in addressing topical planning issues, while also providing students with real-world professional experience.

A special mission of the program is to provide planning education opportunities for a diverse student population, including working students who prefer to attend the program on a part-time basis.

ABOUT THE PROGRAM
The Master of Science in Urban Studies and Planning program introduces students to a variety of issues facing urban areas through a multi-disciplinary framework while building a firm theoretical and practical expertise in urban planning, urban politics, economic and community development, historic preservation, public management and urban fiscal.

The Geographical Information System lab and engaged with faculty members who are respected scholars and leading practitioners in the field of urban studies. The classes are held in well-equipped classrooms in the Coastal Georgia Center. Small classes and a low student-faculty ratio ensure that the students receive a lot of individual attention from their instructors.

WHAT DO PLANNERS DO?

In their jobs, some planners have responsibility for specific geographic areas such as individual neighborhoods in a city or region; within those areas they may provide assistance on a variety of substantive issues from land use to transportation. Other planners have substantive responsibilities—such as housing or environmental planning—and provide assistance in their specific specialization to many communities within a city or region. Some planners work on projects which will be undertaken within a year or two while others focus their efforts on projects many years in the future.

Today, planners may move back and forth between jobs in the public, non-profit, and private sectors over the course of their career. They may also work for different levels of governments at different times. And they may change their specialties or their focus long after they leave school in response to on-the-job experiences or the opportunity for new challenges.

While you may think of planning as an urban activity, it actually occurs in communities of all sizes. Many planners work in small cities, in rural areas, and for Indian Nations. Others work in suburban neighborhoods at the periphery of large regions while still others have jobs in the dense core of major metropolitan areas.

The Tufts University Department of Urban and Environmental Policy and Planning (UEP) offers two graduate programs in public policy and planning: a master of arts (M.A.) degree in urban and environmental policy and planning which is accredited by the Planning Accreditation Board and a master of public policy (M.P.P.) degree. Both degrees equip public-spirited individuals for rewarding careers in government, nonprofit organizations, citizen advocacy groups, and the private sector.

UEP students focus on public problems in the broad areas of urban and social policy and planning, or environmental policy and planning, as well as on issues linking these various concerns. UEP’s goal is the education of a new generation of leaders, "practical visionaries" who will contribute to the development of more just and sustainable communities. A key step toward this is making our institutions more responsive to child, adult and ultimately community wellbeing by helping them understand, empathize with and respond to the social, economic and environmental needs of individuals and communities.

UEP has a flexible MA and MPP curriculum built around a set of six core values:

- An appreciation of the inextricable linkages between social, economic and environmental issues and the ability to make policy and planning recommendations accordingly;
- An appreciation of the role of values in policy formation and planning and the ethical/social responsibility of policy and planning professionals to act accordingly;
- An appreciation of the deeply embedded nature of gender, age, race, class, dis/ability, culture and sexual orientation in all aspects of public policy and planning;
- An appreciation of the centrality of spatial, social and environmental justice to all aspects of public policy and planning;
- An appreciation of the need to understand the role of individual and community rights and responsibilities in public policy and planning;
- An appreciation of the need to move society toward the development of sustainable communities where there is a high quality of human life; delivered in a just and equitable manner while respecting the limits of supporting ecosystems.

The Planning Graduate Program at the University of Arizona offers a Master of Science in Planning intended for students interested in careers creating healthy, equitable, and livable communities. This two-year program offers concentrations in Environmental/Healthy Cities, International/Borderlands, and Land Use and Community Development. In addition to chosen area of concentration, students participate in an engaging core curriculum designed around the many social, political, economic, and cultural factors currently influencing the built environment. With a third of the coursework dedicated to electives, students have the flexibility to create a program tailored to their individual interests.

The School of Landscape Architecture and Planning is committed to advancing sustainable design and planning for arid regions.

Applied research projects, headed by faculty members, play a vital role in Arizona while our academic research has an international, national and local impact. Many student outreach projects have won awards from the Arizona Planning Association and the American Institute of Certified Planners. Projects, mentors, and the required internships allow students to step confidently into the profession.

The Planning Graduate Program addresses the issues of growth experienced in the Southwestern United States, including expanding rural residential land use. Because of the Program's unique location, students get hands-on experience in border and tribal planning issues and the environmental problems associated with dry climates and urban sprawl. The Planning Graduate Program has a number of Returning Peace Corps Fellows who are able to continue their work with under-privileged neighborhoods, communities and non-profit organizations around Tucson and southeastern Arizona.

**FYI**

The Planning Graduate Program at the University of Arizona offers a Master of Science in Planning intended for students interested in careers creating healthy, equitable, and livable communities. This two year program offers concentrations in Environmental/Healthy Cities, International/Borderlands, and Land Use and Community Development. In addition to chosen area of concentration, students participate in an engaging core curriculum designed around the many social, political, economic, and cultural factors currently influencing the built environment. With a third of the coursework dedicated to electives, students have the flexibility to create a program tailored to their individual interests.

The School of Landscape Architecture and Planning is committed to advancing sustainable design and planning for arid regions.

Applied research projects, headed by faculty members, play a vital role in Arizona while our academic research has an international, national and local impact. Many student outreach projects have won awards from the Arizona Planning Association and the American Institute of Certified Planners. Projects, mentors, and the required internships allow students to step confidently into the profession.

The Planning Graduate Program addresses the issues of growth experienced in the Southwestern United States, including expanding rural residential land use. Because of the Program's unique location, students get hands-on experience in border and tribal planning issues and the environmental problems associated with dry climates and urban sprawl. The Planning Graduate Program has a number of Returning Peace Corps Fellows who are able to continue their work with under-privileged neighborhoods, communities and non-profit organizations around Tucson and southeastern Arizona.

The School of Community and Regional Planning is located at the naturally scenic UBC campus in beautiful Vancouver, British Columbia. SCARP's mission is to advance the transition to sustainability through excellence in integrated policy and planning research, professional education and community service. The School of Community and Regional Planning at UBC was the first dedicated planning school in Canada. With more than five decades of experience in graduate planning education and research, SCARP pioneered the integrated approach to planning for development.

The Canadian Institute of Planners and the American Institute of Certified Planners has long recognized our Master’s and Ph.D. degrees. As one of the largest graduate planning programs in Canada, SCARP has the equivalent of 15 full-time faculty, 100 students enrolled, and a teaching program characterized at once by diversity and integration. Fortunately, we are also small enough that students and faculty are able to enjoy regular one-on-one contact.

The University of Colorado is a three-campus system with four locations: the University of Colorado Denver’s downtown Denver campus and Anschutz Medical Campus in Aurora, plus UC Boulder and UC Colorado Springs. More than 55,000 undergraduate and graduate students currently pursue studies on these UC campuses. The UC System is ranked sixth among public institutions in federal research expenditures by the National Science Foundation ($661 million overall in FY08). Of this well over half is generated at the University of Colorado Denver. Academic prestige is evidenced in the System’s four Nobel laureates, seven MacArthur Fellows, 18 alumni astronauts and 19 Rhodes Scholars. For more information about all three CU campuses, visit www.cu.edu.

The BEnvd Degree offers emphases in architecture, planning and design studies, and is offered on the Boulder campus. BEnvd (Planning) graduates achieve advanced standing in our graduate MURP Program. Graduate professional Masters Programs offered by the College on the Downtown Denver Campus in addition to the MURP, include the MArch, MLA, and MUD. Master of Historic Preservation is pending as of 6/10/09.

The MURP Degree, moreover, can be paired with all the other Masters Programs offered by the College, and formal Dual Degree relationships also exist with Public Affairs (MURP/MPA), Business (MURP/MBA), and Law (MURP/ JD), and Public Health (MURP/MPH, pending as of 6/10/09).

The Ph.D. Program in Design and Planning draws from the extensive strengths of the UC System, and a Certificate Program in Historic Preservation is available, involving all departments. Opportunities for multi-disciplinary work abound and a remarkable number of diverse environmental settings reside close at hand, offering a rich mix of practice contexts.

The College's four Centers afford additional opportunities for qualified students: Center for Sustainable Urbanism; Children, Youth and Environments; Center for Research and Design; Center for Preservation Research; and the Colorado Center for Community Development. During 2005-7 the Department of Planning and Design faculty published five books, 33 refereed articles and 25 book chapters while editing three major scholarly journals: Progress in Planning (Elsevier), Children, Youth and Environments (online), and Journal of Transport and Land Use (online). With colleagues in three campus units its members were central in the campus’ securing an NSF IGERT grant for doctoral study in Sustainable Infrastructure for $3.2 million. the Department of Planning and Design has entered an MOU with the Seoul Metropolitan Government to train its senior planning staff. The college maintains strong international ties including those with a women's School of Architecture in Saudi Arabia (Dar Al-Hekman College), Tongji University (China), the UN Habitat Programs in Nairobi, Kenya and others. The NSF IGERT(PhD) program in Sustainable Infrastructure partners with researchers in Mumbai, India. Applications to the MURP are at an all-time high for Fall 2009. An entering class of 80 is anticipated. Applications originate from throughout the U.S., and from many other nations.

**Bioregional Planning and Community Program Mission**
The mission of the Bioregional Planning and Community Design program is to prepare future public leaders, create and disseminate new knowledge, and assist communities and organizations in planning for sustainable development, sustainable efficient conservation planning and management, and sustainable human quality-of-life within and across bioregions. The program’s faculty, staff, and students work with communities, through Learning and Practice Collaboratives (LPCs), create community-based plans, programs and policies that sustain and enhance their culture, resource base, built environment and economic vitality.

**Geographic Focus**
Program graduates fill an important niche in the Intermountain West and have skills that enable them to be effective planners in other parts of the world. The initial focus of the program is on Idaho, but with the expectation that it will be expanded over time to include opportunities nationally and internationally.

**Interdisciplinary**
The Bioregional Planning and Community Design program is distinguished from other planning programs around North America in two ways: (1) it represents a university-wide, interdisciplinary approach that fully integrates education and research with community engagement; and (2) it supports, promotes and advances bioregional thought and process.

**Undergraduate requirements**
Many undergraduate degrees prepare students well for this graduate program. All entering students should have previously completed a statistics course and undergraduate course work in social sciences (economics, anthropology, sociology, etc.) and ecology or complete these in addition to the degree requirements. Students with significant pre-existing course
work or professional planning practice may request credit for this prior work.

The program offers the following:

- **Master of Science in Bioregional Planning and Community Design**: Includes specializations in land use planning; environmental planning; economic development planning; transportation planning; public land planning; and housing, social and community development planning.

- **Graduate certificate**: Designed for those who want to incorporate sustainable planning principles and concepts into a related professional discipline, such as transportation engineering, environmental and natural resource management, architecture, landscape architecture, and public administration.

**Student Chapter – American Planning Association (SPPUD)**

Students for Place-Based Planning & Urban Design (SPPUD) strives to promote place-based planning and community design as a means of empowering citizens, strengthening communities, preserving natural resources, promoting social justice, and accommodating society’s needs in a sustainable manner.

**IS PLANNING THE CAREER FOR ME?**

Are you interested in positive social, economic, environmental, and physical change?  
Do you want to work with people from various backgrounds to develop a better community?  

Do you like to communicate with others about ideas, programs, and plans?  
Are you challenged by complex problems--and excited about being part of a cooperative process to devise solutions to those problems?  

Do you think about the future--about what could be--rather than about what is?  

**If you answered "YES" to any of these questions, you should seriously consider becoming a planner!**

FYI

WHAT IS URBAN AND REGIONAL PLANNING?

Urban and regional planners do many types of jobs and are involved in almost any kind of government or private activity which seeks to affect the future or respond to community change. The majority of planners work in traditional planning areas such as land use, environmental protection, economic development, transportation, community design, housing, and social planning. However individual planners can still have a wide variety of responsibilities within these broadly defined specialities. Other planners work in less traditional areas, often with people from other disciplines, such as healthy communities or energy development or school planning. Some planners become generalists—they develop a level of expertise in several substantive areas. Others become specialists and define themselves as housing or transportation or environmental planners.

The Department of Geography offers a graduate program leading to a Masters of Science (MS) degree in Land Use Planning Policy aimed at preparing students for planning research or professional practice. The Land Use Planning Policy program curriculum is multi-disciplinary, taking full advantage of a wide-range of planning and planning-related courses offered in Geography and in over twenty other disciplines campus-wide. It offers emphases in three critical sub-fields of land use planning and stresses in all areas a holistic policy approach for addressing the planning challenges of the Twenty-first Century. The Department also offers a graduate program leading to a Ph.D. in Geography with, inter alia, emphases in various areas related to land use planning.

**RCPL MISSION STATEMENT**

RCPL's mission is to advance the art and practice of planning through educating students for lifelong professional practice and through expanding the knowledge on which practice is based. Distinguished features include the program's:

* Singular focus on the professional masters degree,
* Well-established reputation, dating to its founding in 1948,
* Alumni, many of whom have achieved national prominence,
* Small size, which allows close student-faculty relationships,
* Curricular flexibility, which accommodates students' interests,
* Multi-disciplinary perspective,
* Commitment to improving professional planning practice that addresses urban and regional issues in Oklahoma and environs.

**2005-2008 RESEARCH PROJECTS INVOLVING RCPL FACULTY AND STUDENTS**

* High speed passenger rail transportation systems.
* Mobility benefits of urban rail transit projects.
* Data mining the National Transit Database.
* Economic effects of highway bypasses on rural communities.
* Comprehensive Plans for the cities of Mustang, Tuttle, Geary, Noble, Perkins and Newcastle OK.
* Reuse Strategies for Superfund Sites in Oklahoma City, OK.
* Homeless Service Provision in Oklahoma.
* Northeast 23rd St. Streetscape Assessment in Oklahoma City, OK.
* Freight Movement for Tulsa's Transportation Plan 2030.
* Operating and Maintenance Cost Models for Light Rail Transit.
* Oklahoma Institute for Quality Communities founded in July 2008.

FYI

• Oregon is renowned for the Oregon Land Use system, which is considered one of the model state planning programs in the U.S.

• Eugene is located within 90 minutes of both the Oregon coast and Cascade Mountains, offering year round hiking, fishing, kayaking, as well as winter skiing. Eugene is a progressive city with more than 100 miles of trails, a metropolitan bus service free to UO students, an extensive open space and parks system, and new sustainable business initiatives.

• PPPM is known for its work on sustainability, collaborative and participatory approaches to planning, community development, and environmental planning. PPPM is affiliated with the community service center (CSC), providing students with access to real world experience with actual clients. The CSC also coordinates yearlong paid internship through the Resource Assistance for Rural Environments (RARE) program, which provides students with (1) a monthly stipend, (2) medical insurance, (3) possible eligibility for in-state tuition after one year of service, and (4) up to 9 graduate credits in the UO Planning Program.

• PPPM is linked with the Institute for a Sustainable Environment, the Institute for Policy Research and Innovation, and the Sustainable Cities Initiative.

• The community and regional planning program offers concurrent degrees in business, conflict and dispute resolution, environmental studies, geography, historic preservation, landscape architecture, law and public administration.

**HOUSING, SOCIAL, AND COMMUNITY DEVELOPMENT PLANNING**

Many planners practice in these overlapping areas. Housing planners help develop strategies to increase the supply of affordable housing and expand home ownership among low income or disadvantaged groups. These planners often try to create incentives and remove constraints on private home builders or work with public or non-profit organizations to build housing units for low income families or senior citizens. Many housing planners try to encourage mixed use developments which offer services and jobs close to where people live; others promote projects which provide housing opportunities for people from a mixture of income levels. Planners concerned with the social aspects of a community often combine their interest in housing with efforts to increase the overall quality of life in poor or minority neighborhoods. Many social and community planners work to improve multiple aspects of a targeted neighborhood, combining many substantive planning skills from economic development to urban design. For example, community and social planners may work to improve transit service in disadvantaged communities or develop job training programs for unemployed residents or provide better public health facilities in low income neighborhoods. These planners often work with land use and transportation planners.

FYI

The Muskie School of Public Service's Community Planning and Development program was inaugurated in 1997 and graduated its first students in 1999. The degree reflects the commitment to the environmental and community development values of the School's namesake, the late Senator Edmund S. Muskie.

The program focuses on the planning and development needs of New England communities, but prepares students to deal with issues encountered across the United States. In addition to the core courses, students may select from concentrations in land use and the environment, community and regional development or a joint Masters-JD degree program with the University of Maine School of Law.

The student body is drawn primarily from Maine and New England states, and courses are offered on schedules suitable for both full and part-time students.

The CPD program is affiliated with three research centers located within the Muskie School. The Casco Bay National Estuary project is a cooperative program addressing the environmental quality of Casco Bay and its watersheds. The EPA New England Environmental Finance Center undertakes projects addressing smart growth issues throughout New England. The Maine Center for Business and Economic Research undertakes research and technical assistance projects in economic development and transportation.

The program is also part of a major new initiative in sustainability in partnership with University of Maine.

The Program endeavors to provide financial assistance to all students who require it. Non Maine resident students may be eligible to apply funding assistance to tuition at resident rates. Residents of New Hampshire, Vermont and Connecticut are eligible for reduced tuition.

A distinguishing feature of the planning degree in the School of Urban and Public Affairs (SUPA) is its location in the heart of the Dallas-Fort Worth metroplex, a rich urban laboratory of 12 urban counties and 136 municipalities with a total regional population of over 6 million. The Dallas-Fort Worth (DFW) metropolitan area is currently the fastest growing major metropolitan area in the nation, with a population growth rate of 29 percent between 1990 and 2000, which is twice the national average. It’s size moved up in rank from number 9 in 1990 to number 4 in 2006 among United States metropolitan areas, with total population of over six million, according to July 2008 estimates (U.S. Census Bureau, 2008), and estimates of 2008 total employment is about 3.6 million. This complex urban arena offers a wide array of opportunities for student projects, internships, and employment. Planning faculty, staff, and students frequently work on projects in cooperation with city governments, public agencies, and nonprofit organizations through the Institute of Urban Studies. The Institute supports many graduate students through research grants and projects funded by various organizations, providing hands-on experience studying urban issues and involvement with the problems facing our communities.

The Master’s in City and Regional Planning (MCRP) program prepares students for professional planning careers in the public, private and nonprofit/nongovernmental sectors. The Urban Planning and Public Policy PhD program prepares doctoral students for careers in university teaching and research, as well as senior-level research or practitioner positions. Coursework combines theoretical inquiry and analysis with application, offering students diverse approaches to policy and planning issues.

The application of planning theory and knowledge to “real world” planning problems gives students practical experience and field orientation to the profession of planning in a variety of topic areas. Using the metroplex as a laboratory, MCRP students choose an emphasis area in Urban and Suburban Design and Development, Green Cities and Transportation, and Creative Cities and Economic Development.

MCRP students have an opportunity to pursue dual master’s degrees in seven programs: Public Administration, Architecture, Landscape Architecture, Urban Affairs, Civil Engineering, Environmental and Earth Science, and Social Work. Dual Degree programs enable students to earn two master’s degrees simultaneously by sharing up to 18 credit hours between both degrees.

FYI

Note that the Planning program is part of the Department of Geography; planning students therefore have access to ‘joint-geography-planning’ courses taught by both planning and geography faculty and to the supervisory services of both Planning and Geography faculty. There are total of 40 graduate faculty in the Department of Geography (including the core Planning faculty).

Joint Degree Programs:

• Planning and Community Development
• Planning and South Asian Studies
• Planning and Environmental Studies
• Planning and Public Health

FYI

The Master in Urban Planning program focuses on urban development, especially in the context of large cities and their suburbs and larger regional contexts. The program aims to develop the professional skills needed for planning practice, especially critical thinking, communication skills (including consensus-building and negotiation), and preparedness to work in the diverse social context of planning in large, metropolitan areas.

In addition to our Masters degree programs and specializations, the department offers an undergraduate Certificate in Urban Planning Studies and an interdisciplinary post-baccalaureate Certificate in Geographic Information Systems. For more information about these programs, please visit the program web page.

Our location in the largest city in Wisconsin means that students have excellent access to a rich set of studio and internship experiences.

The University of Wisconsin-Milwaukee is an urban research university located less than two miles from downtown and only a few blocks from beautiful Lake Michigan in a quiet neighborhood of homes and small shops. The campus is easily accessible by walking, bike, and public transportation from many areas of the city. Beginning in Fall 2006, graduate student housing will be available in Milwaukee's lively Prospect and North commercial district, an area of eclectic shops, restaurants, nightlife.

Our faculty represents diverse backgrounds and expertise. Students in the program comment that the faculty members are outgoing toward students and involved in assuring the success of each of our students. All faculty members are involved in community-based scholarship and teaching. Faculty members are especially well-known for their work in economic development (including entrepreneurship, data infrastructure for local economic development planning, and neighborhood revitalization), GIS, and sustainability. Faculty members are also involved in research on urban politics and planning, participation in planning, and reindustrialization of urban centers.

Faculty serve on a wide variety of public and nonprofit boards and committees, including the Wisconsin Brownfields Study Group, the Wisconsin Policy Research Institute, the Public Policy Forum Committee on Wisconsin Water Policy, the Menomonee Valley Partners, Hmong-American Friendship Association, and the Center for Resilient Cities.

The faculty in urban planning also founded a charter high school, the School for Urban Planning and Architecture that serves students in the City of Milwaukee promoting community development and social justice.

### FYI

Western Michigan University is located in Kalamazoo, Michigan, a mid-sized metropolitan area in Southwest Michigan. Less than one hour from the sandy shores of Lake Michigan, Kalamazoo is located halfway between Detroit and Chicago, and easily accessible by highway, Amtrak, or air via the Kalamazoo / Battle Creek International Airport (AZO).

The Kalamazoo area is known as a cosmopolitan region that is home to an innovation economy, a thriving arts and cultural scene, and other educational assets, including Kalamazoo College and the “Kalamazoo Promise” (a nationally renowned program that offers full college scholarships to graduates of the Kalamazoo Public Schools).

Western Michigan University is a major state-supported research university with more than 24,000 students and 900 full-time faculty. WMU is one of 76 upper-tier public institutions nationally recognized as a Research University by the Carnegie Foundation for the Advancement of Teaching. Since 1999, WMU has been named every year by US News and World Report as one of the “Best National Universities”.

The Department of Geography at WMU was founded in 1905 and offers programs at both the undergraduate and graduate level. The Department is home to an outstanding array of resources including frequently-updated computing facilities, award-winning student organizations, and the W.E. Upjohn Center for the Study of Geographical Change. The Department has offered studies in planning for more than 30 years and has a successful record of placing students in professional positions and graduate or doctoral programs.
