

WEBINAR

Physical Therapy Considerations of Neurologic Presentations in COVID-19

APRIL 25, 2020

2 HOUR DURATION

[VIEW THE WEBINAR RECORDING](#)

(You'll be prompted to enter your name and email and then the recording will start.)

About the Webinar:

During this webinar presenters will discuss the emerging evidence of neurologic impairments found in patients with COVID-19. This will include physiology and anatomy, neurological vital sign considerations, impact of medications, and assessment and treatment considerations when evaluating this population.

By the end of this session, the participant will:

- Recall a brief overview of the pathophysiology of COVID-19 as it relates to the neuro system
- Discuss emerging evidence related to neurologic impairments found in COVID-19 patients
- Consider the importance of vital sign monitoring when working with neurologic patients with this condition
- Review assessment of delirium, weakness and other impairments found in this population
- Discuss treatment strategies
