

## **Clinical Pathology Reading List (Phase II, Tampa)**

The Phase II examination in Clinical Pathology tests knowledge of animal disease, and descriptive and interpretative skill in veterinary pathology. Test items pertain to specific species, systems or diseases, laboratory management, methodology and data handling as commonly encountered in the practice of veterinary pathology.

This reading list is provided as guidance for candidates. The sources are common journals and textbooks that represent the appropriate level of pathology knowledge. Candidates should feel free to utilize other equivalent sources and they should seek mentor guidance if they are unclear about source equivalency. For journals, candidates should focus on articles published with the last five years but note that only articles in print or electronically released by January 1<sup>st</sup> of the exam year are considered for that year's exam. For textbooks, candidates should be utilizing a recent version that is representative of current pathology knowledge.
