AFA/EBI Fraternity and Sorority Assessment

Selected Results 2003 and 2013 Longitudinal Study by Academic Class Standing

Over the last decade, the AFA/EBI Fraternity and Sorority Assessment has measured the overall satisfaction and educational impact of fraternity and sorority life on student's college experiences. Over 114,000 fraternity and sorority members have completed this assessment from over 150 institutions. This note will expand on the longitudinal differences presented in the AFA Advance U webinar *"The Past, Present, and Future: What Have We Learned about the Fraternity/Sorority Experience?"* and provide results by academic class standing for a number of data pointed.

The academic class of respondents has shifted slightly toward upper-class fraternity and sorority members making up a larger portion of the survey respondents.

Freshmen: Hours Studied per Week

Sophomore: Hours Studied per Week

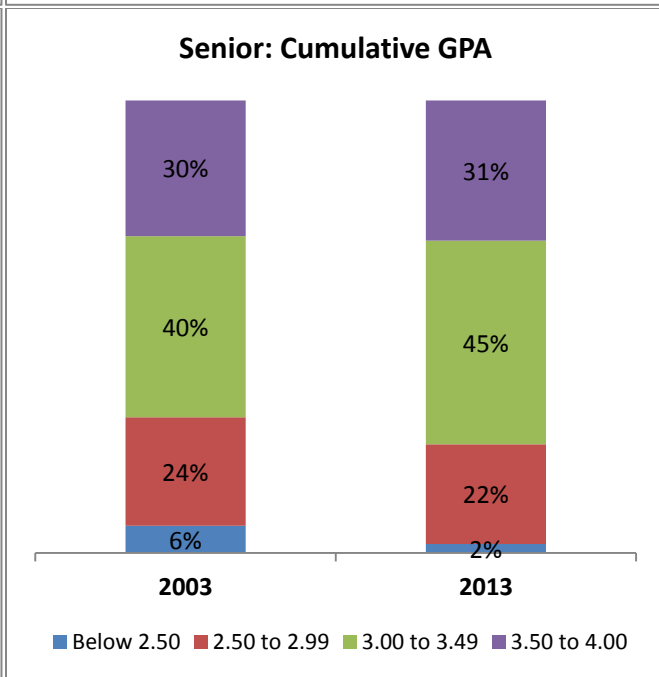

Junior: Hours Studied per Week

Senior: Hours Studied per Week

In 2013, a greater number of fraternity and sorority members, in each class, are studying more than 10 hours a week than in 2003; while fewer are studying less than 5 hours a week.

Given the number of hours fraternity and sorority members are studying, it is not surprising that students are reporting higher GPAs than they did in 2003. In each class, there has been a decrease in the number of fraternity and sorority members with GPAs below 2.50 and between 2.50 and 2.99. More students are reporting GPAs above 3.00 and above 3.50 than a decade ago.

Satisfied with Ability to Study in Your Room in Chapter House

In 2013, fewer fraternity and sorority members were satisfied with their ability to study in their rooms than in 2003. The difference in satisfaction lessens between each cohort of students.

Satisfied with Community Service Programming

In both 2003 and 2013, there is a consistent pattern in the data; older fraternity and sorority members are less satisfied with the community service programming. The 2013 data shows fewer students satisfied compared to the 2003 data.

Fraternity/Sorority Experience Enhanced Ability to Transfer Social Skills to Other Settings

More fraternity and sorority members in 2013 indicated their experience enhanced their ability to transfer social skills to other settings than in 2003.

Fraternity/Sorority Encouraged You to Drink Responsibly/Abstain

More fraternity and sorority members reported their fraternity and sorority encouraged them to drink responsibly or abstain from drinking in 2013 than in 2003. While the trend over the last decade has been an increase, the percent of upper-class students continues to lag behind their younger peers.

Fraternity/Sorority Encouraged You to Adopt a Healthy Lifestyle

The increase in the percent of fraternity and sorority members indicating they were encouraged to adopt a healthy lifestyle is considerable between 2003 and 2013.

Fraternity/Sorority Experience Enhanced Ability to Solve Problems

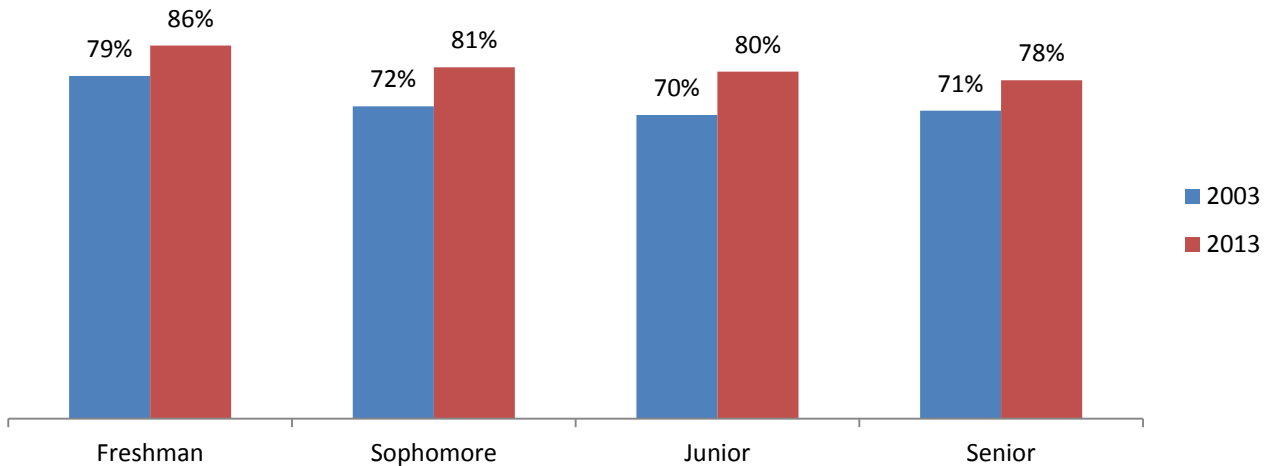

More fraternity and sorority members reported that their experience enhanced their ability to solve problems in 2013 than in 2003. Additionally, more students in their senior year indicated the problem solving skills were enhanced by their experience than freshman students in both years examined.

Fraternity/Sorority Experience Enhanced Ability to Assume Positions of Responsibility

In 2013, more fraternity and sorority members indicated their experience in their fraternity or sorority had enhanced their ability to assume positions of responsibility than in 2003.

Plan to be Involved in Your Fraternity/Sorority After Graduation

More fraternity and sorority members intended to be involved in their fraternity or sorority in 2013 than in 2003. Although there is an increase among each class between 2003 and 2013, fewer upper-class fraternity and sorority members intended to be involved than their younger counterparts.
