Healthcare Documentation Integrity Week
May 15-21, 2022

WHAT'S YOUR STORY?

The importance of the patient story cannot be underestimated—it can be the difference between life or death.

Acknowledging that documentation errors have the potential to cause patient harm and that those errors happen far too frequently is the first step in reducing avoidable adverse events.

Help bring awareness to the importance of healthcare documentation that supports patient safety and wellness. Share YOUR story of how medical record errors compromised, or had the potential to compromise, your care.
