

# DIGESTIBLES FOR DISTANCE LEARNING

Small Ideas for a Big Job!

DIGESTIBLE #34

## Teaching Math Virtually....

Learning math virtually can be a challenge, and teaching it can be even tougher. It's critical to have **a tool that enables math teachers of all grades to show process, to show detailed thinking and collect that same input from students.** Many of us have seen how Khan Academy does it through recorded screens, but here are a few more options for teaching math virtually.

Alecia at AIMS

### Digital Whiteboard Options

Sure, you can share your screen in Zoom and Google Meet and that helps. But sometimes, a whiteboard is just the thing for teaching math. [Bitpaper.io](https://bitpaper.io) is a collaborative whiteboard that allows teachers not only to share their annotations, but to do so in a way that allows students to add to that, to import images and even export a PDF of the entire process (assessments, ya'!!!). It's free for kids to use, but there is a fee for schools. [Jamboard](https://jamboard.com) is another one a few of you have suggested. It integrates with Google Classroom seamlessly, and it's a free app. You can check out **more interactive whiteboard apps** below.

### Leveling the Playing Field in Math

*Education Week* is offering a free summit for math teachers of all grade levels on **Wednesday May 20th from 1:00-**

**2:30pm.** What's extra awesome is that they have NINE different breakout options, ranging from "Future-Proofing Math Instruction: Teaching Math in Remote Learning Environments at Every Grade Level" to "Utilizing Math History to Embrace Equity, Failure, and Authentic Problem Solving" and "Math Talk: Tool for 'Productive Struggle'." You can learn about the other breakout options and sign up for the summit below.

This last little "extra" is a short and sweet video introduction to how this **elementary school math teacher** uses [Padlet](#) in his class.
