

Many states are developing standards to protect the privacy and personal health information for minors. It is our policy not to list the specific medications prescribed to minors. Therefore, OptumRx has adopted the below process to allow you to view a dependent(s) or spouse's pharmacy benefit information.

How can I view my dependent(s) or spouse's pharmacy benefit online?

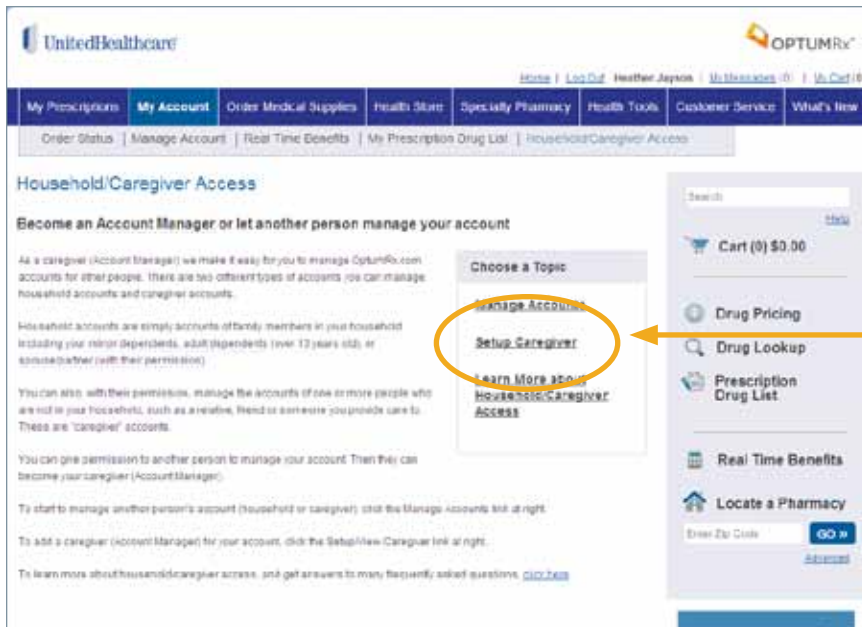

You can view all your dependents' information under the age of 13 by accessing their account from the *My Prescriptions Page*. Select the dependent's account information you'd like to view using the *View Accounts* drop down box on the left hand side of the page.

Any dependent 13 years of age and older and your spouse will need to provide permission in order for you to access their pharmacy benefit information.

To manage and access their account:

- ▶ Your covered dependent or spouse must register on the member website listed on your new health plan ID card.
- ▶ Within the pharmacy section of the member website, go to *Household/Caregiver* view under the *My Account* tab.

- ▶ Select *Set Up Caregiver* under *Choose a Topic*. Your dependent or spouse must set you up as a caregiver by entering your name, birth date, address, phone and email into the *Add Caregiver Access* online form. Submit the form.

- ▶ Once the *Add Caregiver Access* form is submitted, a confirmation email is generated and sent to your email address.
- ▶ The email will contain instructions and a special security code that you will use to register within the pharmacy section of the member website.
- ▶ Click the *Get Started* link in the email invitation to go to the website and follow the steps to register as a caregiver.
