

Preparing for the Battlespace of the Future

Cybersecurity Mission Capabilities, Services
and Resources for Defense Agencies

Leading Cybersecurity and IT Solutions Provider

Focused Exclusively on Serving the U.S. Federal Government.

About Optiv + ClearShark

Optiv + ClearShark is a cybersecurity and IT solutions provider focused exclusively on serving the U.S. federal government. From the data center, cloud and to the edge, we have decades of experience securing and modernizing federal agency data and infrastructure. Our world-class advisory and engineering team is comprised of mission-focused, results-driven subject-matter experts with deep technology and agency domain knowledge and security clearances.

Now part of Optiv, the cyber advisory and solutions leader, Optiv + ClearShark partners with federal agencies to advise, deploy and operate complete cybersecurity programs.

Noteworthy Technical Expertise

We lead with engineering, period. With more cleared, OEM-trained professional services engineers than sales reps, we leverage our highly technical skillset to carefully curate and customize solutions for federal agencies. We maintain the same training and certifications as our top OEM partner engineers and our technical expertise is unparalleled. You can count on a trusted, technical partner with Optiv + ClearShark.

Culture of Creativity and Innovation

Our employees are on the cutting-edge of cyber innovation, driving a culture of curiosity and creativity that encourages us to explore technologies new and old. Think of us as your guide. Together, we take the lead in navigating the complex and dynamic market, helping to customize a solution just right for each environment and mission.

Focused on Sensitive Federal Networks

Optiv + ClearShark has been working exclusively in sensitive networks for decades. With the majority of our team holding security clearance with TS/SCI with poly, we have intimate knowledge of the most mature, advanced, challenging and secure government environments. This deep expertise coupled with our nuanced understanding of government policies, mandates and procurement process, streamlines the day-to-day operations, allowing us more time to focus on driving value.

- VA CCTV
- Trellix DoD ESI

As a technical buyer in the public sector, you're faced with multiple challenges: seemingly countless products and solutions, a slew of government mandates and executive orders, ever-evolving budgets and sales partners without the right level of technical expertise. Optiv + ClearShark is here to help.

We Believe Nothing Should Stand in the Way of Making Government More Secure.

1 Staying ahead of evolving cyber threats and rapid technology advances

2 The challenge of meeting compliance standards

3 Limited resources to implement, deploy, optimize, and manage solutions

Cyber resiliency is within your reach. Optiv + ClearShark has the solutions for your toughest challenges.

No matter where you are in your journey, we've got the resources, services, and expertise for your agency.

Technical Sales and Engineering

A wide breadth of vendors and the deep technical knowledge to select and design the right solution for your environment. From your whiteboard to our lab and then into your environment, we partner with you each step of the way.

Expert Federal Implementation and Deployment Services

Expert, focused implementation and support to ensure you experience the full value of your solutions, supported by a deep bench of cleared and uncleared resources.

Managed and Co-Managed Service Solutions.

Let us manage your solutions alongside you or for you. Extract the full value from your tech stack by leveraging vendor-recognized experts with experience in any environment.

Advisory & Compliance Services

Respond to government mandates and ensure your agency is cyber-resilient. Custom, comprehensive strategies for CMMC, FISMA, Zero Trust, and what comes next.

We solve the federal cybersecurity problems that seem unsolvable. Here's how we do it.

Federal Experience

We were born out of the most sensitive environments in the world. Our experts have years of government experience inside agencies.

Agile Perspectives

A strategic ability and experience to contextualize the full scope of problems. We draw from our commercial parent company to bring new thoughts and ideas to your unique environment.

Certifications and Clearance

From technical expertise to the highest levels of clearance, we have a vast breadth of talent. No matter what you need, we have the in-house team to ensure it's managed well.

Continuous, Collaborative Support

Insights into wherever you are on the cybersecurity compliance journey, from A to Zero Trust. We provide the bespoke combination of solutions, expertise, and services you need.

Vast Vendor Ecosystem

As a wholly owned subsidiary of Optiv, the nation's leading cyber advisory and solutions provider, our combined line card includes 450+ world-class security technology partners. We pride ourselves on being outcome-biased and vendor-agnostic – always focused on identifying the right-fit solution for YOUR unique environment.

The nation's adversaries have a strategy that depends on the government not being ready for the next threat. Let's disappoint them.

Optiv + ClearShark, the leading cybersecurity and IT solutions provider focused exclusively on serving the federal government.

Key Mission Capabilities

Delivering the Tactical Capabilities Needed Today and Mapping to the Strategic Objectives Required Tomorrow

On-Premises Managed (OPM) SaaS for Air-Gapped Cloud and Enterprises

Optiv + ClearShark creates OPM SaaS capabilities based on mission needs. OPM SaaS delivers the same SaaS capabilities offered today with one exception—instead of coming to us, we bring the SaaS solution to you and your Air-Gapped Cloud and Enterprise mission.

Map the Network

Optiv + ClearShark delivers the capability to map the network, leveraging digital twin technology. For decades a requirement has existed for a vendor-agnostic approach to map the network across cloud and enterprise networks. Digital twin technology allows customers to see every network, layer device and their configurations.

SCIF and Classified Area Security and Compliance

Optiv + ClearShark delivers the capability to prevent wireless and cellular rogue intrusions in SCIFs by leveraging sensor-based technology. All wireless and cellular devices can be identified, tracked and reported on in real-time. Approved assets and waived medical devices are tagged to prevent false alarms.

Zero-Trust (ZT)

Optiv + ClearShark understands ZT is not product, but a strategy leveraging various capabilities. Whether your ZT strategy is focused primarily on a network layer or application layer approach, we can deliver the ZT capabilities you need.

Comply to Connect (C2C)

Optiv + ClearShark's team consists of the founder of C2C and has the global presence and past performance delivering the capabilities that make programs like C2C possible.

AI Data Analysis = Actionable Intelligence

Optiv + ClearShark's technology partners recently announced a new partnership to allow their customers to speak to their data using AI to streamline data analysis and achieve actionable intelligence. Customers are then able to leverage the AI to create mission applications based on the actionable intelligence.

Data Observability and Management

Optiv + ClearShark delivers the capability to empower and manage data flow. API integration and data orchestration are complex and drive technology debt by increasing the amount of data being consumed by every back-end tool. Manage all data flows and data retention requirements from a single platform.

AI-Driven Attack Signal Intelligence

Optiv + ClearShark is delivering AI-driven Attack Signal Intelligence capabilities for both cloud and network detection and response. AI-driven prioritization automates alert prioritization by analyzing, scoring, and ranking each detection, so security teams know which threats are the most urgent.

Technology Procurements and Life Cycle Refresh Management

Optiv + ClearShark is leveraging our strong technology partner relationships and global purchasing power to reduce the total cost of ownership for technology procurements and life cycle management.
