Being a leader in today's environment parallels the shocking experience of being hit by a funnel cloud while flying at 38,000 feet in the air. Our organizations have had "blue sky days" but more often have to weather "more than normal turbulences". The first session will provide the participant, leadership strategies that they can immediately take back into their organizations and apply; taught through the experience of falling out of the sky on a 737 jet. More indepth tactics will be presented in the second session that directly applies to today's environment of textile management.
