Friendly Fun

Canoeing and Kayaking are great fun. Just ask any paddler you find on the water.

Paddling offers so much to so many; quiet lazy paddling, intense adrenaline or the path to more adventure and fun.

Paddling is a great way to access nature, experience reflective moments and enjoy family and friends away from the distractions of life.

Conflicts often arise between various boating groups because of craft size, education and training of the operators, maneuverability, geographic constraints and the sheer numbers of recreational users of the waterways.

Paddlers do need to be aware of a few of the “Rules of the Road” when sharing resources with other marine traffic. Importantly, keep a proper lookout.

Remember to be courteous to other boaters and law enforcement officers. They’re there to help you to be safe and have fun!
Be Aware

First and foremost, please be aware of your surroundings. You may be the only craft on the water or may be sharing the channel with a large container ship. Whatever the circumstance, your awareness of other traffic may make the sole difference in the safety of everyone on the water. Paddlers do not travel as fast as motorized craft. If you see a powerboat, do not assume that you can pass ahead of it if traveling across its path. The safest way for paddle craft to cross the path of a powerboat is astern.

Remember to cross other boats as a group instead of straggling across the river and blocking other traffic.

In shared waterways, the more boaters watching out for others, the safer everyone will be.

Big Boats, Bright Lights

Some busy waterways have “lanes of travel” similar to the Interstate highway system. Know the area you plan to paddle. If you are near commercial waterways, the navigation charts change often and you need a current set.

The depth of the channel may limit deep draft vessels. You, however, are very mobile and agile. Make use of your ability to move out of the way. If you are not crossing the channel stay close to shore. Large stationary objects offer a margin of protection.

At night, a white light must be shown toward oncoming traffic. Bright colors go a long way in not only keeping track of your fellow paddlers but make it far easier to see you if you become separated from your craft.

If motorized craft are operating close to you, you are much less likely to capsize if you turn your bow into the wave and don’t take the wake motion broadside.

Rights of Passage

Learn the channels in your area and what the buoy markers mean. While onboard and facing downstream or leaving a harbor, green lights indicate starboard (right) and red lights indicate port (left).

When returning or heading upstream, red lights or buoys should be on your starboard side. Remember, “Red Right Returning.” The markers are for the larger craft so if you stay between the light or buoy and the shore, you are out of the way of any of the larger, faster craft and less likely to encounter wake and turbulence from commercial vessels.

Since the events of 9/11, recreational boating in the United States has changed. Now many harbors and waterways have security zones surrounding different resources.

In ports and harbors, there are now restrictions on crafts within 100 yards of all U.S. Navy vessels. On local lakes and rivers, there may be restricted areas around bridge abutments, large dams and some shore based facilities such as powerplants. Some jurisdictions also have law enforcement personnel stationed near drinking water reservoirs to protect against biological incidents.

As an American citizen, please cooperate with those individuals and understand that we all need to work together in public and private to keep our nation safe. Safeguard all the things we value, including our boating resources!

See and Be Seen

Wear bright, noticeable clothing

Use reflective tape on your paddle blades

Keep your whistle handy

Any vessel less than 20 meters should not impede the passage of a larger ship, whether under power or not.

Monitor Channels 13 & 16 on your VHF Radio

At night and during low-light conditions, a white light must be shown toward on-coming traffic
