Title of Project

List Team Members
Description of the Health Problem

• Maximum 2 slides
• Summarize the problem being addressed
• Include statistics, demographics to put the problem into state and national context
• Specify risk factors for this individual
• Family and community context
Precursors and Consequences of the Health Problem

• 1 slide
• For the individual, and in general
Recommended Interventions

• 1-3 slides
• What you would recommend to help this individual
• Details of interventions
  – include potential time frames
• Consider factors that will help or hinder improvement
• Strategies to deal with obstacles
Follow-Up

• 1 slide
• Show how individual’s progress would be assessed over time
• List measures and indicators
Primary Prevention for a Community or Larger Population

• 1-2 slides
• How might this problem be addressed on a population level?
• Describe possible primary prevention interventions and their objectives
• Include policy level
• Describe barriers to achieving objectives and how they might be addressed

© 2011, Department of Community and Family Medicine, Duke University, Durham NC
Evaluation

• 1 slide

• Describe how you would assess the impact of a population level intervention. (examples of clear and measurable objectives included in resources page)

• List outcome measures, indicators or survey tools you might use
Conclusion

- 1 slide
- Summary of problem, recommendations, and measures
- Include both individual and community levels
References

• 1 slide
• Minimum of 6 references relevant to the health problem and interventions, in AMA format
