BioSand Water Filters can remove up to 99% of bacteria and viruses, as well as worms, amoebae, protozoa, and parasites, providing pure water for a family. They are already used in many countries. Friendly Water will lead the training for the World members. We use CAWST (Center for Affordable Water and Sanitation Technology – www.cawst.org) material. We have offered training in the production of BioSand Filters in the US, India, Kenya, Burundi, Rwanda Uganda, Ethiopia, Zimbabwe, Congo, Honduras, Haiti, and Afghanistan.

**What will you gain from the training?**
- Learn how to fabricate, install, and maintain BioSand Filters (BSF)
- Work with others around the world to introduce and produce this simple, eco-friendly, low-cost household technology
- A notebook and CD’s packed full of information

**What will the training cover?**
- BioSand Filter theory and design
- Hands-on fabrication
- Testing, assessment, and trouble-shooting
- Community health and sanitation training
- Local implementation models and business planning
- Tips for working and living in other cultures
