RAINWATER CATCHMENT ACCREDITED PROFESSIONAL WORKSHOP

OCTOBER 5 & 6, 2015
DUNCAN, BRITISH COLUMBIA

This two day AP-level workshop is an in-depth rainwater harvesting course required for those seeking ARCSA Accredited Professional (AP) status. This course provides attendees with knowledge for rainwater harvesting, both active and passive, design for both outdoor and in-home rainwater use, sanitation for potable uses, rules and regulations, guidelines, business management, project planning, site planning and installation, safety, system construction and maintenance. The course tuition includes a Rain Harvesting Planning Manual which has been expanded to include all of North America. Considering increasing water constraints and declining water quality, this workshop is intended to provide a viable alternative. This workshop also will teach offsetting water demand that needn't be potable.
