The Honorable Nancy Pelosi  
Speaker of the House  
U.S. House of Representatives  
Washington, D.C. 20515

The Honorable Mitch McConnell  
Majority Leader  
United States Senate  
Washington, D.C. 20510

The Honorable Kevin McCarthy  
Minority Leader  
U.S. House of Representatives  
Washington, D.C. 20515

The Honorable Chuck Schumer  
Minority Leader  
United States Senate  
Washington, D.C. 20510

Dear Speaker Pelosi, Leader McCarthy, Leader McConnell, and Leader Schumer:

We write to request that Congress take immediate action to address the urgent need to expand Americans' access to COVID-19 and influenza testing and immunization by designating pharmacists as providers under Medicare Part B in the next legislative package. We value the patient care services that pharmacists provide as we strive for beneficial patient outcomes, particularly during the COVID-19 pandemic. COVID-19 testing and immunization are key aspects of control measures for this terrible pandemic. It is critical to enable all front-line healthcare professionals to provide care in alignment with their training and expertise to improve health outcomes in response to the public health emergency. Expanding people's access to care from pharmacists will multiply their healthcare access points.

There is strong evidence that team-based care that includes primary care providers, pharmacists, and nurses improves patients' health.<sup>1,2,3</sup> Yet in many parts of the U.S., policy barriers preclude pharmacists from providing or being reimbursed for such care. Like physician practices, hospitals, and other healthcare providers, pharmacists cannot be there for patients without fair and reasonable reimbursement for their services. Congress must recognize pharmacists as providers of billable services to reinforce the meaningful expansion of patient care, especially in underserved or otherwise vulnerable populations.

Over 90% of Americans live within five miles of a community pharmacy,<sup>4</sup> making pharmacists the most widely accessible health care providers. Evidence suggests pharmacists have more opportunities to interact with patients in the community than other providers,<sup>5</sup> however, if action is not taken, the country may not be able to leverage these critical access points to testing and immunizations.

We urge Congress to fill the gap by recognizing the full potential of the pharmacist on the patient's health care team and authorizing pharmacists as providers under Medicare Part B to provide COVID and influenza testing and vaccinations. As the number of

COVID-19 cases spike in certain communities across the country and the flu season approaches, the opportunity cannot be missed to ramp up patient access to testing and immunizations.

Sincerely,
