
Page 1: ASNM BOARD ELECTION CANDIDATE FORM

Q1 Name

Justin W. Silverstein

Q2 Credential(s)

DHSc, CNIM, R.EPT, R.NCS.T, CNCT

Q3 Current Position and Organization

Owner/CEO/Neurophysiologist
Neuro Protective Solutions

Q4 Education

A.T. Still University
Arizona School of Health Sciences
College of Graduate Health Studies
Doctor of Health Science (DHSc)
Dissertation: Causal Factors for Position Related SSEP Changes in Spinal Surgery - Published in European Spine Journal. Vol 25 No 10: Pgs. 3208-3213

Q5 PROFILE QUESTIONS:How do you feel you can contribute to the leadership of ASNM? What strengths/passions/talents do you hold that would benefit ASNM?

As a practitioner, researcher, educator and administrator in IONM, I feel I bring a depth of knowledge that would benefit the ASNM as we navigate the future of this field and profession. I am the CEO of my group and have years of management and leadership experience. I am very good working with people and prioritize solutions when conflict occurs. My passion is to propel this field forward through education and research. I believe everyone in this field needs to be afforded the opportunity to learn even if they never had classical training in neuroscience and neurophysiology since most in this field come from a variety of backgrounds and education levels. It up to the leadership in this field to foster this growth.

ASNM 2018 Candidate Form

Q6 With changes in health care service delivery and reimbursement, how do you feel you can contribute to keep ASNM moving forward in the right direction?

I deal with changes to reimbursement for IONM on a daily basis and would bring my knowledge and expertise as a business owner that is navigating the world of reimbursement for IONM to the ASNM. Understanding how to stay ahead of the curve has become a full-time job for me and it is something that I would bring to the table for the ASNM.

Q7 ASNM constantly seeks ideas of how to better serve our membership through education, resources, representation to other professional entities, connections and networking or other means of advancement. What do you think ASNM could offer its members that would provide value?

The ASNM needs to support education initiatives in colleges and universities so there are more than just 1 bachelors program in IONM. Eventually, every non-physician provider in IONM should be graduating from an accredited program with a PhD specific to neurophysiological monitoring. However, until then, the leadership in this field should provide educational opportunities to those currently practicing and this starts with the ASNM. The ASNM can support modules of education so that those that are already working in the field that may not have had an opportunity to learn some of the basic science in a class room can grow and learn the science of surgical neurophysiology through online modules and mentorship.

Q8 Personal Statement: Please provide any additional information to the members.

I entered this field over a decade ago with just a bachelors degree and realized how little I truly knew. In the time since, I have put myself through graduate school to learn the intricacies of neuroscience and health care, started my own business and had 3 children with my wife. I am dedicated to this field as it is my career and passion and I want to serve this field in any capacity I can to ensure we as a discipline move forward.

Q9 Professional Affiliations

American Society of Neurophysiological Monitoring (ASNM)
International Society for the Advancement of Spinal Surgery (ISASS)
American Clinical Neurophysiology Society (ACNS)
ASET - The Neurodiagnostic Society (ASET)
American Association of Electrodiagnostic Technologists (AAET)

Q10 Publications, Awards and Appointments

Awards:

Paper: Motor Evoked Potentials for Femoral Nerve Protection in Transpsoas Lateral Access Surgery of the Spine is the most read article in the Neurodiagnostic Journal Taylor & Francis Publishing

New York State Proclamation for Charitable Services

Provided charitable neurophysiological monitoring service to a girl we helped bring over from Ethiopia that needed a spinal deformity surgery. Also, contributed financially to assist in the patient traveling from Ethiopia to USA.
